FEATURE & BENEFITS

- Pro-Line uses a CAD Computer Program enabling the design team to initiate exact drawings with perfect accuracy.
- Fully integrated design/foiling/manufacturing means fresh, innovative ideas. Premium Gel Coat with high gloss retention, for long lasting beautiful finishes.
- Pro-Line uses a 3 oz. skin coat as a print barrier for smooth glass-like surfaces.
- All Pro-Lines are hand-laid for maximum strength and durability.
- High tech. 3610 knitted fiberglass is used in the layup of Pro-Line boats for maximum strength and superior fiberglass to resin ratio, resulting in strong, lightweight fishing boats.
- All stringers and transoms are installed while the part is still in the mold for perfect alignment and fit. This ensures true performance from the finished product.
- All Pro-Line parts are allowed to cure in the molds to minimize any distortion. This takes time and costs money, but perfection is expected at Pro-Line.
- Pro-Line laminates backing material into every hull and deck built everywhere hardware will be installed.
- Pro-Line fuel tanks are manufactured using only the highest quality marine aluminum. Pro-Line then pressure tests the tanks three times before they are allowed to leave the factory. This ensures years of trouble-free service.
- Pro-Line uses a closed cell foam flotation under the sub-floor and inside the F.I.S.T. stringer systems. Closed cell foam is extremely buoyant and does not absorb water. It also adds strength to the hull and acts as a sound deadener giving you a safer and quieter ride.
- All Pro-Lines are fitted with fiberglass inner liners for rugged durability and easy maintenance.
- Pro-Line boats hull and deck are joined together using polyester bonding compound and epoxy coated stainless fasteners. The gunwale joint is filled with polyurethane sealant to prevent leakage and provide additional adhesion.
- Pro-Line uses Marine Grade Stainless Steel on all of their hardware (cleats, hinges, etc.) for strength and a long lasting luster.
- All Pro-Line wiring is color-coded, heavy gauge wiring that meets or exceeds NMMA requirements. All wiring connections are sealed with heat shrink tubing to protect the connection from the elements. Pro-Line takes this extra step to ensure years of trouble free service.
- Unlike most other corporately owned boat companies, with Pro-Line you can choose your own engine brand.
- Pro-Line upholstery and canvas are done in-house to ensure control over quality and cost, guaranteeing the consumer the highest quality product at the best possible price.
- All Pro-Line boats are NMMA certified, which is a higher standard than what the U.S. Coast Guard requires. This helps ensure boating safety and trouble-free service for years to come.
- All Pro-Line boats use the F.I.S.T. (Fiberglass Integrated Structural Technology) Stringer System. F.I.S.T. is a superior boat building process that utilizes a fiberglass stringer system and high density Divinycell Foam coring in place of wood. It's the highest standard for the construction of rugged fishing boats and Pro-Line backs it with a LIFETIME (see footnote) Structural Hull Warranty. The F.I.S.T. system with Divinycell Foam coring eliminates the possibility of rotting wood.
- Pro-Line offers a Lifetime 10 year transferable hull warranty that helps keep the resale value of your boat higher.

Footnote: Lifetime Structural Hull Warranty is Limited to Original Purchase and Covers Structural Defects. Transferable Refers to the First Ten Years of Coverage and May Be Transferred to a Second Owner.
