While we endeavor to be as accurate as possible, certain changes in standard equipment, options and the like may have occurred which would not be included in the Owner’s Manual. All weights and fuel capacities are estimates and could/will vary with each vessel and with each application. In all cases, consult your local Pro-Line dealer for the most current information.
Introduction

Congratulations on the purchase of your new Pro-Line Boats 29 Grand Sport sport fishing boat. Welcome into the proud family of satisfied Pro-Line owners. Every expedition lets you enjoy the outstanding features designed into every boat we construct. Your new Pro-Line is more than just a boat, it's a whole new lifestyle.

Pro-Line's commitment to the needs and wishes of the sport fishing family has resulted in a superior fishing craft providing you with comfort, performance, security, and outstanding fishability. All of our boats comply with U.S. Coast Guard (USCG) safety regulations and are designed and crafted in accordance with the National Marine Manufacturers Association (NMMA), the American Boat and Yacht Council (ABYC) standards, and the Common European directive (CE).

This manual (to be kept onboard your Pro-Line) is designed to provide you with information necessary for the safe, efficient operation and care of your new Pro-Line. Take the time now to carefully review the owner’s manual and the additional information in your owner’s package to maximize your enjoyment and safety as well as familiarize yourself with your new boat.

We have prepared this manual to help you fully enjoy each voyage while operating your boat safely. While the information in the manual cannot and does not cover every boating situation, we urge you to read this manual carefully and familiarize yourself with the boat before using it. If a specific method or procedure is not recommended, you must make sure that whatever action you take is safe for you, your passengers and others on the water. Always use common sense when boating.

Dealer Responsibilities

Your dealer’s responsibilities include but are not limited to:

- Pre-delivery verification of proper rigging and operation. Deliver the boat in water ready condition unless you and your dealer have agreed upon other arrangements.
- Complete the pre-delivery checklist with the customer at the time of delivery.
- Provide adequate orientation in the general operation of your Pro-Line including an explanation of the specific safety considerations regarding the use of the systems and components.
• Provide an explanation of the owner's package and literature, including the warranty registration cards for the vessel, engines and all of the separately warranted equipment and accessories.
• Discuss the terms of all warranties and emphasize the importance of registering each warranty with the specific manufacturers.
• Repair any damages that may have occurred to the boat while the boat has been in the dealer's possession.
• Provide service to Pro-Line boat owners within the locality of the dealership.
• Explain local and out of area service procedures during and after the warranty periods.

Customer Responsibilities

• Review and sign the Pre-Delivery Inspection (PDI) report for the boat and motors with your dealer to ensure that your boat is in top condition when you take delivery.
• Examine the boat at time of delivery to insure that all systems and components are functioning safely and properly. Report any outstanding issues (i.e., scratches, missing items, etc.) to your dealer before or during the delivery of the boat.
• Read all literature and instructions to ensure proper usage and operation of the equipment as well as how to use and maintain all equipment as directed.
• Read and understand the limited warranty. Sign the warranty registration card and mail it to Pro-Line Boats.
• Contact your local Pro-Line dealer for assistance with any warrantable repairs.
• Transportation of your boat to and from your dealer or repair facility for warrantable repairs.
• Schedule your 20-hour boat and engine check up with your dealer.
• Know your boat and the rules of the road before you use your boat.
• Be proficient in boat handling and safety. This manual is not intended to provide complete training on all aspects of general boat operations. We at Pro-Line urge all boat owners and operators to attend a boating safety course before operating a boat.

Owner's Package

Each Pro-Line boat comes with an Owner's Package that contains this Owner's Manual along with materials supplied by various manufacturers whose products have been installed on your boat. Manufacturers of certain products (i.e., Stereo, TV, Stove, Refrigerator, Microwave, Engines, Electronics, etc.) provide their own limited warranty and owner's manuals. While we have endeavored to be as accurate as possible in this manual, if you should notice a discrepancy between the information in this manual and that of the individual supplier's manual, always follow the instructions in the supplier's manual.

Make sure that you complete the individual warranty cards for these products and forward them on to the respective manufacturers to register for your warranty with them. Retain all materials in your Pro-Line Owner's Package for easy reference.

Insurance and Registration

As the owner of the boat, you are legally responsible for all liabilities of operation. Secure insurance protection with a reputable insurance company through your local insurance agent.

Learn about and operate your boat in accordance with local, state, and federal laws, regulations, and registration requirements.
**Yacht Certification**

In accordance with the National Marine Manufacturers Association (NMMA) and the American Boat and Yacht Council (ABYC), all boats larger than 26 feet in length are required to be Yacht Certified. Therefore, a per person and/or pound capacity is not assigned to vessels over 26 feet in length. It is up to the operator's discretion to determine a safe load. These yacht standards are based on Standards and Recommended Practices for Small Craft published by the ABYC, 3069 Solomons Island Road, Edgewater, MD 21037 (410-956-1050).

**Warranty**

The Pro-Line Boats Limited Warranty is attached to the warranty card. After signing the warranty card, your dealer will provide you with your copy of the warranty and mail the warranty card to Pro-Line Boats, Inc. A copy of the Pro-Line Boats Limited Warranty is also included in this chapter.

The Pro-Line Boats Limited Warranty extends only to parts that were factory installed. Dealer installed items are the responsibility of the dealer. All warrantable repairs are to be completed by an authorized Pro-Line dealer. Your dealer should be able to assist you with any service or warranty related issues.

If for any reason you are dissatisfied with the services performed by your dealer, we suggest that you discuss the matter with the service manager. The service manager is responsible for the quality of service being performed and has a direct interest in resolving your issues to your satisfaction. If the matter is complicated and cannot be resolved to your satisfaction by the service manager, we suggest that you talk to the general manager or owner. In most cases a compromise can be reached.

If the matter cannot be resolved by the dealership to your satisfaction, contact the Pro-Line Boats Customer Service Department by calling 352-795-4111 or by writing to:

Pro-Line Boats, Customer Service Dept.  
PO Box 1348  
Crystal River, FL 34423-1348  
FAX: 352-795-9373

So that your dealer and we can provide you with the best possible service, please have the following information available when calling or writing:

- HIN (Hull Identification Number)
- Selling dealer's name and location
Servicing dealer (if different from selling dealer)
Nature of problem
Names of dealership personnel involved with the situation
Record of service performed and approximate dates

When contacting Pro-Line Boats, please keep in mind that your issue will most likely be resolved at the dealership, using their facilities, equipment, personnel and/or sublet repair facilities.

Note: There are items that are not covered by the Pro-Line Boats Limited Warranty, including but not limited to the following:

- Incidental and consequential damages (i.e., storage charges, telephone or rental charges of any type, inconvenience or loss of time or income).
- Damage caused by neglect, lack of maintenance, accident, abnormal operation, improper installation or service.
- Haul-out, launch and towing charges.
- Transportation charges, service call charges and/or travel time to and from a repair facility, customer's home or marina.
- Service requested by customer other than that which is necessary to satisfy the warranty obligation.
- Oils, lubricants or fluids used in normal maintenance.
- Air freight, next-day or second-day air, or any special delivery fees unless pre-approved.
- Gelcoat cracking, chalking, crazing, discoloration, yellowing or blistering.
- Hull blisters that form below the water line: Osmosis blistering is not covered by our limited warranty. The phenomenon of osmotic blistering is known to occur in salt water, brackish water and/or fresh water. Any boat left in the water for any period of time is susceptible. Most marine bottom paint manufacturers offer coatings that help protect the hull against osmosis blistering. We highly recommend that you add a protective coating to your hull. Find out which type of bottom paint is recommended for your area and have an epoxy barrier coat and bottom paint applied by a professional.
- Parts not installed by the factory.

The Ten Year Limited Hull Structural Warranty is transferable to subsequent owners for a nominal fee. Please contact your dealer or Pro-Line Boats to obtain the applicable transfer form so that the new owner will have piece of mind knowing that their pre-owned boat comes with the same structural hull warranty protection that was afforded to the original owner.
PRO-LINE® BOATS LIMITED WARRANTY — 2007 MODEL YEAR

Ten Year Limited Hull Warranty. Pro-Line warrants to the original retail purchaser ("Purchaser") that for ten (10) years after the date of delivery to its original retail purchaser, each new fiberglass hull manufactured by Pro-Line shall be free from structural defects due to material or workmanship under normal non-commercial use.

One Year Components Warranty. Pro-Line warrants to Purchaser that for one (1) year after the date of delivery to its original retail purchaser, all boat components manufactured by Pro-Line shall be free from defects due to material or workmanship under normal non-commercial use.

Exclusions. This limited warranty does not cover and does not extend to any of the following:

(a) Hull or component failure caused by normal wear and tear, climatic conditions, misuse, neglect, lack of proper maintenance, accident, fire or other casualty damage, racing, overloading, negligence, modification, or commercial use; (b) windshield leakage or breakage; (c) components or equipment not originally installed by Pro-Line; (d) components repaired or replaced unless repaired or replaced in accordance with this warranty; (e) fading, chalking, blistering or cracking of any varnish, gelcoat, paint, anti-fouling coating or metallic finish; (f) tears, cracking, fading, discoloration or mildewing of curtains, cushions, tops, headliners or other fabric or upholstered items; (g) cost of removal or reinstallation of any component (including components manufactured by Pro-Line), or disassembly and reassembly of the unit containing the component; (h) speed, weight, fuel consumption and other performance characteristics of the boat. ANY ORAL STATEMENT OR PRINTED ADVERTISING REGARDING ANY PERFORMANCE CHARACTERISTIC OF THE BOAT OR ITS COMPONENTS SHALL BE CONSIDERED AN ESTIMATE ONLY AND SHALL NOT BE RELIED UPON AS EXPRESS WARRANTY OR AS A BASIS OF THE BARGAIN FOR THE BOAT OR ITS COMPONENTS; (i) electrolysis, galvanic corrosion, crevice corrosion, or any deterioration of underwater components; (j) components not manufactured by Pro-Line, whether or not warranted by the other manufacturer, even if installed by Pro-Line, including but not limited to engines, propellers, generator sets, controls, instrumentation, batteries, appliances and air conditioning. Warranties provided to Pro-Line by component manufacturers shall be passed on to purchaser to the extent such transfer is permitted by the manufacturer. Pro-Line's selling dealer will identify the authorized service dealer for any such components upon request.

Limitations. THE REPAIR OR REPLACEMENT OF DEFECTIVE PARTS SHALL BE PURCHASER'S SOLE AND EXCLUSIVE REMEDY AND PRO-LINE'S SOLE AND EXCLUSIVE LIABILITY UNDER THIS WARRANTY. Pro-Line's obligation under this warranty is limited to the repair or replacement (at Pro-Line's sole election) of any covered item found to be defective, when delivered by Purchaser pursuant to written authorization and instructions from Pro-Line, round-trip transportation prepaid, to Pro-Line's manufacturing plant or other designated repair facility. Repaired or replaced items are warranted as provided herein for the unexpired portion of the applicable warranty period.

THIS WARRANTY, AND THE RIGHTS AND REMEDIES UNDER IT, IS EXCLUSIVE AND IS GIVEN IN PLACE OF ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR PARTICULAR PURPOSE, WHETHER ARISING BY LAW, CUSTOM, CONDUCT OR USAGE OF TRADE. PURCHASER'S REMEDIES SHALL BE LIMITED AS STATED HEREIN AND PRO-LINE SHALL NOT BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR INDIRECT DAMAGES OR LOSSES RESULTING FROM DEFECTS.

THIS LIMITED WARRANTY GIVES PURCHASER SPECIFIC LEGAL RIGHTS. PURCHASER MAY HAVE OTHER RIGHTS WHICH MAY VARY FROM STATE TO STATE. IN THE EVENT THAT IMPLIED WARRANTIES ARE FOUND TO EXIST UNDER THE LAW OF A PARTICULAR STATE NOTWITHSTANDING THE EXCLUSION CONTAINED HEREIN, THE DURATION OF ANY SUCH WARRANTY SHALL BE LIMITED TO THE DURATION OF THE APPLICABLE LIMITED WARRANTY STATED HEREIN.

THE SELLING DEALER IS NOT AN AGENT OF PRO-LINE OR A CO-WARRANTOR AND IS NOT AUTHORIZED BY PRO-LINE TO AMEND OR MODIFY THIS LIMITED WARRANTY IN ANY MANNER.

Predelivery Examination. Purchaser represents to Pro-Line that Purchaser has examined the boat and all its component parts, accessories and equipment, to Purchaser's full satisfaction prior to accepting delivery of the boat from Pro-line, or in the alternative, has been given full opportunity to do so and has declined.

Transferability of Warranty. This limited warranty may be transferred to subsequent purchasers of the boat during the warranty period, provided that such subsequent purchaser pays the required transfer fee to Pro-Line and registers his ownership with Pro-Line within thirty (30) days of such purchase.

Miscellaneous. Pro-Line Boats is a division of American Marine Holdings, LLC. Pro-Line reserves the right to make changes in the design and construction of its products at any time, without notice and without any obligation to incorporate such changes into products of prior manufacture. This limited warranty applies to new boats manufactured by Pro-Line, except as such limited warranty may be transferred to a subsequent purchaser as provided herein. The term "new boats" shall include boats that may have been repaired during the manufacturing process as part of Pro-Line's quality assurance program. This limited warranty contains the entire agreement between Pro-Line and Purchaser and supersedes all prior agreements, discussions, negotiations, commitments and representations, whether oral or written, between them regarding Pro-Line's warranty. If any provision of this warranty, or the application of it, is determined to be invalid or unenforceable for any reason, the remainder of this limited warranty and the application of it shall not be affected.

All communications and notices from Purchaser regarding this limited warranty should be sent to: PRO-LINE BOATS, Customer Service Dept., 1520 South Suncoast Boulevard, Homosassa, Florida 34446. Telephone: (352) 795-4111.

Acknowledgement of Limited Warranty. By signing below, Purchaser (or each Purchaser, if more than one) agrees that he or she has read this limited warranty in its entirety and understands its terms and conditions. Purchaser (or each of them) acknowledges receipt of a copy of this limited warranty at the time of the sale.
Safety

Your Pro-Line boat has been constructed with safety in mind. But, remember, boating safety and the safety of your passengers is YOUR ultimate responsibility. You should fully understand the operations of your vessel as well as the basics in boating safety.

Your local U.S. Coast Guard Auxiliary (USCGA) and the U.S. Power Squadrons (USPS) offer excellent safe boating classes several times a year. If you have not already passed a boating safety course, we recommend that you do so at your earliest convenience.

Plan your trips carefully. Insure ample fuel supply and a reserve. Tell someone where you are going and when you expect to return. Keep current charts onboard. Read USCG boating safety circulars and follow the safety guidelines.

Carbon Monoxide

Be aware of and avoid conditions that can cause Carbon Monoxide poisoning (see USCG boating safety circular 77). Sources of Carbon Monoxide (CO) include any gas or diesel engine and any flame from items such as a charcoal grill, stove or heater. Carbon Monoxide can accumulate to deadly levels in enclosed spaces. Always ventilate occupied areas of the vessel with fresh clean air.

In high concentrations, CO can be fatal within minutes. The effects of CO in lower concentrations are cumulative and can be just as lethal over long periods of time. CO poisoning is often confused with seasickness. So be aware of the following CO symptoms: Itchy and watery eyes, flushed appearance, throbbing temples, inability to think coherently, ringing in the ears, tightness across the chest, headaches, drowsiness, nausea, dizziness, fatigue, vomiting, collapse and convulsions.

Do not stand or swim near the motor when the engine is idling.

Carbon monoxide can harm and even kill you inside or outside your boat!

Did you also know:
- CO symptoms are similar to seasickness or alcohol intoxication?
- CO can affect you whether you’re underway, moored or anchored?
- You cannot see, smell or taste CO?
- CO can make you sick in seconds? In high enough concentrations, even a few breaths can be fatal.

Most important of all, did you know CO poisonings are preventable? Every boater should be aware of the risks associated with CO - what it is; where it may accumulate; and the symptoms of CO poisoning. To protect yourself, your passengers and those around you, learn all you can about CO.

Emergency Treatment for CO Poisoning

CO poisoning or toxicity is a life-threatening emergency that requires immediate action. The following is a list of things that should be done if CO poisoning is suspected. Proceed with caution. The victim may be in an area of high CO concentration, which means you or others could also be in danger from exposure to CO.

- Evaluate the situation and ventilate the area, if possible.
- Evacuate the area and move affected person(s) to a fresh air environment.
- Observe the victim(s).
- Administer oxygen, if available.
Contact medical help. If the victim is not breathing, perform rescue breathing or approved cardiopulmonary resuscitation (CPR), as appropriate, until medical help arrives. Prompt action can mean the difference between life and death.

Shut off potential sources of CO, if possible. Correct ventilation problems and/or repair exhaust problems as appropriate. Investigate the source of CO and take corrective action, such as evacuating and ventilating the area, or shutting off the source of the CO, while at the same time evacuating and ventilating the area.

Where CO May Accumulate - Carbon Monoxide can accumulate anywhere in or around your boat as shown in the following pictures:

- Inadequately ventilated canvas enclosures.
- Exhaust gas trapped in enclosed places.
- Blocked exhaust outlets.
- Another vessel’s exhaust. CO from the boat docked next to you can be just as deadly.
- "Station wagon effect" or back drafting.
- At slow speeds, while idling, or stopped. Be aware that CO can remain in or around your boat at dangerous levels, even if your engine or the other boat’s engine is no longer running!

How to Protect Others & Yourself

You are in command of your boating safety. Follow these simple steps to help keep Carbon Monoxide from poisoning you, your passengers or others around you.

- Know where and how CO may accumulate in and around your boat.
Maintain fresh air circulation throughout the boat at all times. Run exhaust blowers whenever the generator is operating.

Know where your engine and generator exhaust outlets are located and keep everyone away from these areas.

Never sit, teak surf or hang on the back deck or swim platform while the engines are running. (Teak Surfing is a new and dangerous boating fad that involves an individual holding on to the “teak” swim platform of a vessel while a wake builds up then lets go to body surf on the wave created by the boat; hence the term - Teak Surfing.) Teak surfing is never a safe activity.

Never enter areas under swim platforms where exhaust outlets are located unless the area has been properly ventilated.

Although CO can be present without the smell of exhaust fumes, if you smell exhaust fumes, CO is also present. Take immediate action to dissipate these fumes.

Treat symptoms of seasickness as possible CO poisoning. Get the person into fresh air immediately. Seek medical attention unless you are sure it is not CO.

Install and maintain CO alarms inside your boat. Do not ignore any alarm. Replace alarms as recommended by the alarm manufacturer.

Get a Vessel Safety Check. A VSC is a free bow-to-stern safety examination.

Fire

Be aware of and avoid conditions that can lead to accidental fire.

Guard against and watch for fuel spills and leaks.

Inspect wiring for damage or exposure that could lead to short circuits or arcing.

Make sure those who smoke are careful to avoid accidental fire ignition.

Do not allow smoking while fueling.

Keep a USCG approved fire extinguisher on board at all times.

Inspect the fire extinguisher regularly, learn how to use it properly and instruct others as well.

Use water to fight a fire as a last resort after making arrangements to abandon the boat if a fire should get out of control.

Keep the following in mind if a fire is burning out of control and you must abandon the boat:

- Abandon the boat into the wind to minimize burn risk from floating fuel.
- Wear a PFD unless you must swim under burning fuel.
- If swimming under burning fuel, throw a PFD outside of the burning area and swim under the burning fuel to it.

Equipment

USCG regulations require that you have the following Coast Guard approved equipment onboard while operating your boat:

- Fire extinguisher(s)
- Personal Flotation Device (PFD) for each occupant
- One throwable PFD
- Sound signal device
- Navigational lights if operated at night
- Sight signal device approved for day and night use when in coastal waters or the great lakes

In addition, here is a list of suggested equipment you should have aboard your Pro-Line:
• First aid kit and blankets
• Mooring lines and fenders
• Combination oar/boat hook
• Spare prop and hardware
• Spare fuses and bulbs
• Local charts and compass
• 2 way radio
• Floating key chain and spare keys
• Emergency food and water

• Anchor and sea anchor with sufficient line
• Bailing device
• Tool kit and lubricant
• Spare fasteners, hose clamps and plugs
• Binoculars
• Waterproof flashlight and spare batteries
• EPIRB (emergency beacon)
• Navigation device
• Waterproof matches or lighter

**Flooding**

Be aware of and avoid conditions that can cause your boat to flood with water. Possible causes of flooding include:

- Damage to the hull or thru-hull fitting
- Waves washing into the boat
- Water entering cockpit due to improper loading
- Failure to properly install the drain plug.

The boat will become flooded and may swamp, capsize or sink if water enters the boat faster than the bilge pump can expel it.

**Hazardous Conditions**

Keep track of weather developments and avoid hazardous conditions whenever possible. When forced to operate your Pro-Line in storm conditions:

- Wear PFD's.
- Stow loose gear and equipment.
- Place heavy items as low as possible.
- Head for the easiest port to reach a safe location.
- Reduce speed. You are moving too fast if the boat leaves the water.
- If power fails, anchor or rig a sea anchor off the bow (an empty ice chest in a pinch).
- Stay with the boat if it capsizes, unless it is burning out of control.

**Passenger Safety**

You are responsible for the safety and conduct of your passengers. Make sure that:

- You instruct your passengers on the proper use and location of PFD's. Children and non-swimmers should wear one at all times.
- Each passenger is in a safe location when underway and knows to keep the boat balanced.
- At least one other person knows how to operate the boat in case of an emergency.
- Your passengers are aware of propeller dangers and the possibility of sudden maneuvers and jolts.
- The engine is turned off and the key is removed when swimmers are near the prop or using the dive platform.
- All passengers keep away from lines under stress in case they break and recoil.
Regulations

The USCG is the authority of all waterways. Local authorities enforce State Boating Regulations. You are subject to marine traffic laws and "Rules of the Road" for both federal and state waterways. Therefore, you must submit to boarding if requested by the proper authority. There are many publications available from the Coast Guard concerning regulations. Call the United States Coast Guard Info Line at (800)-368-5647 for additional information.

Rules of the Road

Know and use the “Rules of the Road”. Your boat is subject to U.S. Coast Guard enforced marine traffic laws known as “Rules of the Road.” There are two sets of rules: the US Inland Navigation Rules and the International Rules. The latter rules are applicable to all vessels inside the demarcation lines separating inland and international waters. You may obtain a copy of the rules from any of the following and by requesting the publication titled “Navigational Rules, International - Inland.”

- Your local USGC
- The United States Coast Guard Info Line (800)-368-5647
- The USCG Headquarters by logging on to uscg.mil

The information here is only a “brief” overview. Please contact the USCG for detailed information.

- Audible warning signals:
  - One short horn blast: starboard course change.
  - Two short horn blasts: port course change.
  - Three short horn blasts: astern operation.
  - Five horn blasts: doubt about previous signal or danger.
  - A Five-second horn blast every minute: for fog operation.
- When overtaking, give-way vessel announces intention with horn blast(s) and waits for a response, then completes maneuver.
- When approaching head-on, both boats give way after giving appropriate horn blast(s) (preferably to starboard).

- When crossing, a vessel converging from starboard has the right-of-way. Port vessel gives way (both acknowledge with one short horn blast).
- Know and observe navigational buoys and markers.
- Give way to craft under sail.

Alcohol

Don't drink and drive. If you have been drinking, appoint someone who is an experienced boater and has not been drinking to be the designated driver. Never operate a boat under the influence of drugs or alcohol. Operation of motorized vessels while under the influence is a Federal offense carrying a significant penalty.
Controls

Controls and engine systems vary greatly from one engine manufacturer to another. Please read your engine owner’s manual carefully.

Note: If your engine package was not factory installed, some components that are normally standard installations may not be included.

Throttle & Shift Controls for Twin Engines

Ignition – Binnacle, Forward, Neutral and Reverse Gear Operation
The binnacle is located at the console forward of the helm seat. To ensure that the binnacle is working properly, shift the binnacle forward to put the engine in forward gear. Make sure the engine shifts smoothly into idle with no grinding of the gears. Bring the binnacle back into neutral and repeat the same process while going into reverse. Again, ensure that there are no gears grinding. It is important to check the binnacle at wide-open throttle (WOT) to ensure the binnacle is not stiff and operates smoothly while going into the WOT position.

Actual binnacle will vary depending upon the engine package that was selected.

Key Switch Alarm
The key switch alarm is located in the binnacle and sounds when the ignition key is turned on. The key switch alarm is actually a warning alarm that will go off in the unlikely event that an overheating problem occurs with the engine. To check the key switch alarm, turn the ignition key to the right but do not start the engine. The alarm will sound ensuring that the engine warning alarm is working properly. When finished, turn the key off.

Lanyard Stop Switch
To ensure the lanyard stop switch (also called the emergency stop feature) on the engine works properly, first turn on the ignition key and start up the engine. While the engine is running, locate the lanyard stop switch. The lanyard stop switch is installed in close proximity to the binnacle or the ignition. While the engine is running in the neutral position, pull the lanyard stop switch downward until the plastic element at the end of the lanyard pulls the stop switch pin into the off position. This process will automatically stop the engine and will ensure that the emergency lanyard stop switch is working properly.
Shift / Throttle / Trim

Your Pro-Line can be ordered with different shift/throttle systems based upon motor type. Refer to the owner's packet to find the manual pertaining to your particular installation. Each motor has an individual tilt/trim switch located on the port throttle lever. Separate shift and throttle controls are available for each outboard motor.

The throttle lever has three range positions: “Forward”, “Neutral”, and “Reverse”. The shift function occurs in the first portion of the lever travel. After the transmission is shifted into gear, further movement of the lever advances the throttle.

Push the throttle lever ahead to move forward and pull it back for reverse. Centralize the lever to the detent position for neutral. The throttle lever is equipped with a neutral safety switch to prevent the motor from starting in gear. The initial short movement of the lever to engage the transmission should be made firmly to avoid causing gear clash.

**CAUTION:** Use care in shifting to avoid advancing the throttle more than intended.

Steering - Hydraulic with Tilt

Steering systems will differ depending upon your selection of engine package. Please carefully read the owner's manual provided by the specific manufacturer. Tilt steering is included with all factory installed engine packages.

Hydraulic Steering (Verado Power)

Your Pro-Line is equipped with a self-contained hydraulic steering system when your engine package is factory installed. When the steering wheel is turned, the helm pump pumps fluid to the steering cylinder causing it to extend or retract. Periodically, check the fluid level and fill as necessary. Beware of adding too much fluid, especially if the ambient temperature is cold because subsequent expansion could cause leaking or damage to your system. Refer to the owner's manual that was provided by your engine manufacturer.

After every 24 hours of operation check all nuts, caps, and hose fittings for tightness. Make sure the hoses are not chafing or kinking on sharp corners. Also, check that hose ends are not damaged or distorted. The fluid should be changed annually under normal conditions and every six months during times of heavy usage. If your steering does not operate properly, check the following:
• Drive entanglements
• Level of the hydraulic steering fluid
• Hoses and/or fittings for leaks
• Air in the steering system.

To properly check the steering system, start by turning the steering wheel port to starboard. If the engine does not respond the same time as the steering wheel is being turned, this means that there is air in the steering system and the steering system needs re-bleeding. When there is air in the steering, the steering wheel will feel "loose". Contact your dealer to have them bleed the steering system.

**Power Trim**
The power trim unit is located on the engine and can be operated by using the trim button on the engine or by using the trim toggle switch on the binnacle. To ensure the power trim is working, start by pressing the toggle trim switch in the up position and trim the engine to the full up position. Repeat the same process by pressing the trim toggle switch down and the engine will go into the full down position. See the Trim and Tilt information in the Operations section of this manual.

**Steering Wheel**
The stainless steel steering wheel is mounted at the helm along with the binnacle, switch panel and other controls. Please refer to the Care and Maintenance section of this manual for cleaning recommendations.

**Trim Tabs**
The trim tabs on the 29 Grand Sport come equipped with auto retract. The planing tabs are located on each side of the transom on the bottom of the hull. The trim tabs operate independently, up or down, to correct for differing conditions of wind or load. Refer to the owner’s packet for specific information.

Check the operations of your trim tabs before getting underway. To operate the trim tabs locate the trim tab rocker switches on the console. Press both switches forward and hold them down. This will engage both trim tabs and will ensure they are working properly while in the full down position.

The switch on the port side operates the starboard trim tab. The switch on the starboard side operates the port trim tab. To check each trim tab individually, press one of the trim tab rocker switches forward and check to see if the opposite trim tab goes down. For example if the starboard trim tab switch is being pressed down, the port trim tab should be going down. Repeat the same process for the opposite side.

While underway and in open water, clear of other boaters, depress the top half of the switches in half-second increments to achieve the desired degree of trim. To correct a starboard list, depress the top half of the port switch in small increments until the list is corrected. To avoid over trim, allow a few seconds between tab adjustments to allow the boat to respond. If you over trim, simply give the over trimmed tab an adjustment in the opposite direction. Push the top half of both rocker switches in half-second increments to trim the bow down.
Warning: Trim tabs can cause a dramatic change in the attitude and heading of your boat. Adjust them in small increments when in open water and clear of any obstructions.

**Trim Tab Indicators (Optional)**
This indicator switch may be added when trim tabs are factory installed. The waterproof indicator and switch lights up to let you know exactly where your trim tabs are.

**Windlass w/Rope & Chain (Optional)**
The optional windlass anchor system is located on the bow. It is an electric hands free anchor system that allows the driver to raise or lower the anchor while staying at the helm. The windlass comes with 200 feet of ½ inch line and 6 feet of ¼ inch rode.

The windlass is operated by a separate switch and is protected by a 50-amp breaker. The switch is located at the helm. The breaker is located on port bulkhead in the bilge.

To operate the windlass, press the windlass toggle switch to the down position to release the anchor and line. After dropping the anchor, be sure to tie the line off at one of the cleats. If you do not tie off at a cleat, the constant pull against the line could cause the windlass motor to fail. To retrieve the anchor, press the windlass switch to the up position and carefully raise the anchor up but not allowing it to hit the boat.
Refer to the owner’s manual that was provided by the manufacturer of the windlass for operational procedures and information related to the care and maintenance of their product. When in doubt, always defer to the windlass manufacturer’s instructions and/or recommendations.

**Windlass Foot Switch (Optional)**

The windlass foot switch requires the installation of the optional windlass with rope and chain. This optional feature which includes two (2) foot switches that are installed at the helm station, lets you raise or lower the anchor simply by depressing either the up or down foot switch.

Refer to the owner’s manual that was provided by the manufacturer of the windlass foot switch for operational procedures and information related to the care and maintenance of their product. When in doubt, always defer to the windlass manufacturer’s instructions and/or recommendations.

**Bow Thruster (Optional)**

The optional bow thruster comes equipped with a bow thruster and either a joystick or a touch pad control. When it comes to docking in tight spaces, a bow thruster can be a true godsend – but its benefits don’t end there. As a growing number of anglers are discovering, a bow thruster can also prove useful in many fishing situations. The increased maneuverability is a great asset when working a fish.

The performance of a single- or multi-engine outboard can also be enhanced when a thruster is installed, not only in terms of dockside maneuvering, but also when fighting fish.

To engage the thruster, press the on/off switch; the LED light will glow. To move the boat to port, turn the joystick to the left and press the left arrow button. To move the boat to starboard, turn the joystick to the right and press the right arrow button. When the thrust is engaged, the LED light in the switch will glow.

When the thruster is not in use, make sure to disengage the thruster by pressing the on/off switch on the joystick panel; the LED light not glow.

The bow thruster is powered by its own dedicated battery (not included or factory installed) that is installed under the cabin V berth. It is wired to a battery switch that is installed in the storage compartment below the dinette seat. The battery charger charges this battery.

Refer to the owner’s manual that was provided by the manufacturer of the windlass for operational procedures and information related to the care and maintenance of their product. When in doubt, always defer to the windlass manufacturer’s instructions and/or recommendations.
Systems and Accessories

Electrical System

12 Volt Receptacle
A 12-volt receptacle is installed on the console. It is easily accessible and can be used to charge your cell phone, operate a hand held remote spotlight, etc.

Battery Charger - 20 AMP (Optional)
The battery charger is installed in the bilge on the aft side of the forward bulkhead. It is designed to recharge your batteries and extend the life of your batteries in applications where the batteries may be stored for long periods of time.

For operational procedures and information related to the care and maintenance of the battery charger, please refer to the owner's manual provided by the manufacturer of the battery charger. When in doubt, always defer to the instructions and/or recommendations provided by the manufacturer of the battery charger.

Battery Switch for Dual Batteries
The battery switches are installed behind the hatch located below the transom door at the starboard aft corner of the cockpit. They are for battery isolation, parallel operation and disconnect.

The preferred switch position is port engine to position one (1) on the port battery switch and starboard engine to position two (2) on the starboard battery switch.

To test the operations of the battery switch, place the switch in the off position and try to start up the engine(s). When the switch is off, you should not be able to start the engine(s). If you have selected the twin-engine application, a dual battery switch for each engine is included as standard equipment.

Caution: To avoid possible alternator/battery damage on twin-engine installations, make sure that the dual battery switches are never left so both engines are connected together, (i.e., never leave a switch on “BOTH” or “ALL”). Never switch battery positions while the engines are running.

Circuit Breakers
Circuit breakers and/or fuses protect the wiring. In the event a device stops working, check to see if the circuit breaker is tripped or if the fuse is blown. Breakers are installed in the following locations:

- The main breaker, labeled helm main, is located at the port aft corner of the cockpit along with the battery switches for dual batteries.
- Additional breakers and/or fuses for bilge 1, bilge 2, forward bilge, fish box, trim tabs, stereo memory and spare are located next to the helm main breaker.
- Additional breaker switches are also located on the switch panel below the individual switches.
A tripped breaker will protrude or move from its set position indicating that the circuit has been overloaded. Turn off the device(s) on the circuit, then reset the breaker by pushing in once or by returning a breaker switch to the on position. If the breaker does not reset or if it resets and then trips again after the device is turned back on, then a short circuit exists or your device may be damaged, overloaded, or faulty. Correct the problem and then reset the breaker.

If the breaker continues to trip and you are certain the device, switch and wiring are in good repair; either the breaker is faulty or it is too small for the load. Reduce the load or replace the breaker.

**Switch and Breaker Panel**
The switch and breaker panel is located on the console. The numbers shown above each switch in the photo below correspond with the following descriptions provided for each switch:

![Circuit Breakers](image)

1. **Horn** - The horn is used to signal, warn, or alert other boats, swimmers or people on shore. Depress the horn switch to the up or forward position to activate the horn. Release the horn switch to deactivate the horn. Using different sequences of horn blasts indicates different and sometimes dangerous situations to you or someone around you.

   Avoid any horn use without an appropriate purpose. See the Safety Section in this manual and/or take a safe boating course for more information on the proper use of the horn.

2. **Navigation & Anchor/All Around Lights** - Locate the Nav. light switch on the instrument panel. This is a 3-way switch (forward, middle, back/aft) that functions as follows when you press the switch:
   - **Forward position** - Turns on the bow lights and the anchor/all around light. This position will also activate the red light in your compass.
     - If you have Faria gauges on the dash panel, this function will illuminate the gauge lights.
     - If the gauges were provided by the engine manufacturer (i.e., Mercury, Honda, etc.), this switch will not illuminate the gauge lights. Instead, your gauge lights will be illuminated when the ignition switch is turned on.
   - **Middle position** – All lights are off.
   - **Back/Aft position** – Anchor/all around light is on; the bow lights and gauge lights are off.
3 **Wiper (Optional)** – This “2 position switch” activates the optional windshield wiper. Depressing the switch to the up or forward position activates the wiper. Depressing the switch to the down or aft position turns the wiper off.

4, 5, 6 **Forward Bilge, Bilge Pump 1 & Bilge Pump 2** - Your boat is equipped with 3 automatic bilge pumps. The forward bilge pump and float switch are located in the head area. The 2 aft bilge pumps and float switches are located in the aft bilge (below the bilge hatch).

Bilge pumps are wired automatic to the battery and have a manual override located at the switch panel on the console. The automatic float switches are wired directly to the **Starboard** battery terminals through breakers or inline fuses. The circuit breaker is located at the helm next to the manual switches. Depressing the applicable bilge pump switch to the up or forward position activates the pump.

7 **Fish Box Pump** - This switch operates the fish box macerator pump that allows you to drain the water and debris from the aft fish boxes. The macerator pump, which is connected to the collector box (located in the bilge), allows you to pump all the water, ice and scales out of the boxes by grinding up the debris and discharging it overboard.

To activate the pump manually, depress the switch to the up or forward position. This action will drain the fish boxes of water and/or debris, transport it into the collector box/holding tank and then to the macerator pump to be macerated and/or discharged overboard.

When not in use, the switch should be left in the off or down position. Even though your Pro-Line is equipped with a true gutter system, sometimes water will accumulate in the fish boxes. As long as there is power to the fish box macerator pump, the automatic float switches located in the holding tank will activate the pump and automatically discharge the water overboard.

8 **Baitwell Pump** - The baitwell pump is located in the bilge area and is mounted on a seacock (ball valve). For the baitwell pump to operate properly you need to make sure the seacock is in the open position. The seacock is wide open when the yellow seacock lever is vertical. When the yellow seacock lever is horizontal, the seacock is closed.

The underside of the seacock thru-hull is equipped with a scoop to allow the water to be picked up even when the boat is on plane. When the boat is not in the water or the baitwell pump is not going to be used for an extended period of time, the seacock valve should be in the closed position.

To activate the pump, depress the switch to the up or forward position. To turn the pump off after the baitwell tub is full, depress switch to the down or aft position.

9 **Washdown Pump** - To activate the pump, which is located in the bilge, depress the switch to the up or forward position. The washdown pump draws its water from the same seacock as the baitwell pump. To turn the pump off, depress the switch in the down position. Keep the washdown switch in the off position if the pump is not going to be used soon.

10 **Fresh Water** – The fresh water switch directs power to the fresh water pump. Depress the fresh water switch to the forward position to activate the fresh water pump. Then, go to any one of the 3 fresh water stations and turn on the faucet. If the fresh water system is not going to be in use, move the switch to the down position to turn the pump off.

11 **Baitwell Light** - To activate the baitwell light, depress the switch to the up or forward position. This will activate the LED (light emitting diode) light inside your baitwell tub. It is a soft white light that will keep your bait moving and lively. It will also help you locate your bait on those early morning or late night fishing trips. To turn the light off, simply depress the switch to the down or aft position.
12 Cockpit Lights – A 3-position switch operates both the cockpit and bilge lights. The cockpit lights are small circular lights located at the console and/or around the cockpit. To activate the cockpit lights, depress the switch to the up or forward position. Pressing the switch to the aft position activates the bilge light. Move the switch to the center position to turn off the lights.

Note: This switch will not activate both types of lights at the same time.

13 Head Light – The head light switch provides power to the round light located in the head area. To activate the head light, depress the switch to the up or forward position. Then press the on/off switch located on the base of the light to turn on the light. Keep the cabin light switch in the off position if the light is not going to be used soon.

Lighting Systems

Baitwell Light
The baitwell light switch is located on the switch panel and is labeled baitwell has a light symbol on the switch. To turn on the baitwell light, press the switch forward and open the baitwell to see if the baitwell light is on. Press the baitwell light switch to the down or aft position to turn off the light.

Cabin Light - Head
The cabin light switch provides power to the light that is located in the head. To operate the light in the head, depress the cabin light switch on the console to the forward or on position. The light can then be turned on or off from inside the head by depressing the small button on the base of the light assembly.

Cockpit Lights – Bilge Light
The cockpit/courtesy lights have LED (light emitting diode) bulbs with a lifespan of approximately 10,000 hours. The lights give off a soft warm light which should not affect your night vision, but will still provide you with enough light to move around your cockpit safely in low visibility conditions.

Cockpit Lights - To activate the cockpit lights, depress the 3-position switch to the up or forward position. Pressing the switch to the aft position activates the bilge light. Move the switch to the center position to turn off the lights.

Bilge Light – The same light switch activates the bilge light. Pressing the switch to the aft position turns on the bilge light. Move the cockpit light switch to the center position to turn the lights off.

Note: The switch activates either the cockpit lights or the bilge light. It will not activate both types of lights at the same time.

Navigation and Anchor/All Around Lights
The navigation and anchor/all around lights are required to be used for operation at night or under low visibility conditions to indicate your position to other boaters. Visually verify the operation of your navigation and anchor/all around lights and check to be sure that the lights are free from obstructions. You should check your navigation lights monthly during optimum visibility conditions.
- When you are **underway** in low visibility conditions, you should have the Nav switch in the up or forward position. This will activate the navigation lights, as well as your anchor/all around light.
- When you are anchored or in low visibility conditions, you should turn on the anchor/all around light. Pressing the Nav switch to the down or aft position will activate the anchor/all around light.

The navigation lights consist of a pair of stainless steel lights that are mounted at the bow of the boat. The red light is installed on the port side and the green light is installed on the starboard side.

The U.S. Coast Guard requires that the anchor/all around light be installed at the highest point on the boat and must be secured in the up position when you are underway. Therefore, this light will be installed as follows based upon the optional top that you may have selected:

- No optional top – Light will be mounted on the console
- Bimini top - Light will be installed on the Bimini top frame
- Rigid T-top – Light will be mounted on the center of the Trylon top.

**Remote Spot Light (Optional)**
The installation of the remote spot light requires the optional rigid T-top. The remote spot light is mounted to the forward area of the rigid top. To operate the remote spot light, locate the remote spot light panel that is installed on the console.

The switch on the right side of the panel allows you to turn the light on and off. The red LED light located in the center of the panel will be lit when the spot light is turned on. Once the spot light is turned on, the all around toggle lever (also located on the remote spot light panel) can be moved in an up, down, left or right position to rotate the light assembly in the desired direction.

**Spreader Lights and Courtesy Light (Optional)**
The installation of the spreader lights and courtesy light requires the optional rigid T-top. The spreader lights are mounted to the aft side of the rigid T-top frame, next to the T-top rod holders. The dome shaped courtesy light is mounted to the bottom of the T-top storage box.

Two (2) push in switches for the spreader lights and courtesy light are located on the base of the dome shaped courtesy light.

- To operate the dome shaped courtesy light - Press the switch labeled courtesy once to turn on the white courtesy light. When you press the same switch a 2nd time, the white courtesy light will be turned off and the red courtesy light (for night vision) will turn on. Press the same switch a 3rd time to turn off the red courtesy light.
To operate the spreader lights - The spreader light switch operates in the same manor as the courtesy light but only needs to be pressed in once to be turned on and once again to be turned off.

**Underwater Lights (Optional)**
A pair of underwater lights can be installed on the hull just below the water line. The lights have LED (light emitting diode) bulbs with a lifespan of approximately 20,000 hours. The lights give off a soft warm light that attracts baitfish, which in turn attracts larger fish. They also provide a little ambiance for those romantic evenings.

A separate light switch panel is installed on the console. Just set the switch in the on position to turn the lights on and set the switch in the off position to turn the lights off.

**Instrumentation**

**Compass**
The compass is located on the dash on top of the console. To ensure that the compass light is working properly, press the Nav switch in the forward position to turn on the red LED light inside the compass. When finished, turn the Nav switch back to the middle position.

Please refer to the owner's manual provided by the manufacturer of the compass for operational procedures and for information related to the care and maintenance of their product. When in doubt, always defer to the compass manufacturer’s instructions and/or recommendations.

**Horn - Electric**
The horn is used to signal, warn or alert other boats or persons on shore. The horn switch is located on the switch panel. The horn device is located on the starboard side of the deck, forward of the rope locker. Depress the horn switch to the up or forward position to activate the horn, then release the horn switch to deactivate the horn. Using different sequences of horn blasts indicates different and sometimes dangerous situations to you or someone around you.

See the Safety section in this manual for more information. Avoid any horn use without an appropriate purpose. Additional information regarding audible warning signals should be covered in a safe boating course.

**Full Instrumentation / Gauges (Digital Except Suzuki)**
All gauges are installed on the console but the configuration and specific location of your gauges will vary depending upon the selection of the various optional engine packages. If your engine package includes
analog gauges (i.e., Faria), the gauges will light up when the navigation lights are on. If your engine package includes digital gauges provided by the engine manufacturer (i.e., Mercury SmartCraft, Honda, etc.), the gauges will light up only when the engine is on.

Note: For boats rigged with analog gauges (i.e., Faria), the gauge configuration may include individual gauges for the trim, volts and fuel gauges or a multifunction gauge that includes these 4 gauge functions. For boats rigged with digital gauges, the trim, volts and fuel gauges are incorporated into the tachometer gauge.

**Tachometer** - To ensure the tach is working properly, simply turn the ignition key on and start the engine. While the engine is idling, the tach should be reading in the proper rpm range recommended for the engine. Your engine manual will indicate the appropriate RPM range. When you are running at wide-open throttle, the tach should read near the top end of the recommended rpm range.

If the RPM gauge is reading correctly and the engine throttle settings are correct, the tachometer is operating properly. If the tachometer is not reading correctly, refer to the manual provided by the manufacturer of the gauge (included in your owner's package).

**Speedometer** - To ensure that the speedometer (speedo) is working properly, get the boat on a planing speed and check to see if the gauge is reading at the approximate running speed at which the boat is traveling.

Note: The speed-reading on the speedo may vary a few mph from the actual speed that the boat is traveling. Either a GPS or a radar gun can check the running speed.

**Trim** - To ensure the trim gauges/indicators are working properly, start by making sure the engine is trimmed all the way down. Locate the trim gauge on the instrument panel and check to see if the level on the trim gauge is in the full down position. As you trim the engine up, watch the trim gauge and ensure that it coincides with the actual trim of the engine. When finished trimming the engine all the way up, the level on the trim gauge should read in the full up position.

**Volts** - To system check the volt gauge, turn the ignition key on and turn on the engine. With the engine running, check the reading on the volt gauge. It should be reading between 12 and 14.5 volts. This reading ensures that the charging system and the volt gauge are working properly.

**Fuel** - The fuel gauge reads the amount of fuel remaining in the tank. To check the fuel gauge, place a known amount of fuel into the fuel fill and fill the tank. Turn the ignition key on and the fuel gauge should read the approximate amount of fuel in the tank.

For example: If the fuel tank holds 240 gallons of fuel and you pumped 60 gallons of fuel into the tank, the fuel gauge should read approximately ¼ of a tank. This ensures that the fuel gauge and the fuel sender are working properly.

If the fuel gauge is not reading correctly, we recommend that you have the fuel sender checked by a qualified professional before considering changing out the gauge. For more information, please refer to the Fuel/Oil Systems section of this manual.

For specific information related to your gauges, refer to the materials in your owner’s package that was provided by the gauge manufacturer.
Fresh Water System

Note: There must be fresh water in the fresh water tank in order for the fresh water pump to operate. Operating the pump with an empty tank could cause serious damage to the pump.

Fresh Water Stations
The 29 Grand Sport is outfitted with the following 3 fresh water stations:

- Head sink
- Bait station
- Transom sink

Fresh Water Tank and Fill
The 15-gallon capacity fresh water tank is mounted in the floor storage compartment located in the casting deck area at the bow. The tank can be filled via the stainless steel fresh water tank fill located on the port gunwale, adjacent to the head door. Twist the cap to open the fitting. The cap is connected to the fitting by a chain or cable so that it will not fall into the water and/or get lost. Use a garden hose to fill the fresh water tank through this fitting.

Important: Fill the tank with potable water only. Refilling the tank often will help to keep it a source of clean fresh drinking water. Never fill the fresh water tank with anything other than fresh water.

Fresh Water Pump
The fresh water pump is mounted aft of the fresh water tank in the floor storage compartment in the casting deck area of the bow. Depressing the fresh water switch located on the switch panel to the forward position provides power to the fresh water pump.

Go to any one of the 3 fresh water stations and turn on the water to ensure that the water is flowing properly.

If the fresh water system is not in going to be in use, return to the switch panel and turn the fresh water switch to the off position. When you close the faucet, the pump may run briefly. If the pump continues to run with the faucet closed, check the system for leaks or have the pump tested.

Note: If you should hear a sucking sound, you may have a leak on the inlet side of the fresh water tank. There are 2 hoses connected to the top of the tank. The larger
diameter hose is the water fill hose and the smaller diameter hose is the water vent hose. Inspect the hoses for leaks and make certain that the hose connections are secure.

Sea Water System

Bilge Pumps
Your boat is equipped with 3 automatic bilge pumps; 1 forward and 2 aft. The forward bilge pump (500 gph) and float switch are located in the head area. The 2 aft bilge pumps and float switches are located in the aft bilge, below the bilge hatch. Bilge 1, a 1500 gph pump, is the furthest aft pump. Bilge 2, an 1100 gph pump, is installed just forward of Bilge 1.

To check the operation of the bilge pump, first turn the bilge pump on at the instrument panel by pressing the bilge pump switch to the on or forward position; the switch light should be illuminated. To check and see if the bilge pump is operating, open the hatch over the applicable bilge pump and listen to hear the bilge pump running. Second, turn the bilge pump off at the instrument panel and check the bilge pump float switch.

The high water float switch is located further aft on the port side of the bilge.

The bilge pumps are equipped with automatic float switches (white box) that are mounted in close proximity to the pumps. As long as your boat is equipped with an operable battery, the pumps will operate automatically when water is present in the area. Each float switch is equipped with two plastic knobs located on either side of the switch. Turn either one of the knobs to raise the float to engage the applicable bilge pump. If the pump comes on, the automatic float is operating properly. It is recommended that you check the operation of the automatic float switch monthly.

If for some reason the indicator light on your bilge pump switch comes on, check your bilge for water. It is not uncommon for rain water or water from washing your boat to accumulate in the bilge. Standing water will activate the automatic float that is connected to the bilge pump. If you notice your pump running frequently during your day on the water, you should check the thru hull fittings, hose connections, etc. for any possible leaks.

Keep the bilge area clean and free from debris that could clog ports or inhibit float movement. Also, keep the battery (starboard) that provides power to the bilge pump charged. If the battery is not charged and flooding occurs, the boat could swamp causing damage and possible loss of life or property.

Baitwell Pump
The baitwell switch at the helm controls the baitwell pump (800 gph), which is mounted on a seacock in the bilge area. The baitwell pump and seacock are accessible via the bilge hatch. Raw water for the baitwell tub comes through the seacock, to the baitwell pump and then to the baitwell tub.
Before turning the pump on from the helm, check to be sure that the seacock is open. The seacock is wide open when the yellow seacock lever is vertical. When the yellow seacock lever is horizontal, the seacock is closed. The seacock should remain closed when the baitwell pump is not in use.

To operate the baitwell pump, locate the baitwell switch on the console and press the switch to the forward position to turn on the pump. When the baitwell pump is operating, go to the baitwell tub and visually check to see if water is pumping into the tub through the aerator fitting. This will ensure that the baitwell pump is working properly.

To turn the baitwell pump off, press the baitwell switch to the aft position. You should always turn the baitwell switch off at the helm if the pump is not going to be used soon.

If you find it necessary to run the baitwell pump while you are underway, you may be forcing more water than necessary up through the seacock. In this instance, adjust the seacock lever to a 45 degree angle so that the seacock is only halfway open. The seacock lever may require additional adjustments to find a setting that works best for you. Even when the baitwell pump is turned off, if the seacock is open, the baitwell tub will continue to fill with water while you are underway.

The 50-gallon capacity baitwell tub, which located aft of the helm seat, comes equipped with an aerator head, 2 overflow drains that allow circulation to keep bait alive, a plug for the drain and a baitwell light.

**Raw Water Washdown Pump**

The washdown pump is mounted on top of the starboard aft stringer and is equipped with a pressure switch. This pump shares the same seacock with the baitwell pump and is accessible via the bilge hatch.

Before operating the washdown pump, make sure that the seacock at the baitwell pump is in the open position before turning on the pump. The seacock is wide open when the seacock lever is in the vertical position. When the seacock lever is in the horizontal position, the seacock is closed. The seacock should remain closed when the baitwell and/or washdown pumps are not in use.
To turn on the washdown pump, locate the washdown switch on the instrument panel and press the switch to the forward position. If you turn on the washdown pump switch and you do not feel pressure, the seacock may not be open. Verify that the seacock is open and depress the switch again.

The raw water washdown fitting is located in the port aft corner of the aft cockpit. Just attach a standard variety garden hose to the fitting.

When the washdown pump is on, turn the control knob on the fitting to verify that the washdown system is working properly. When not in use, the washdown switch should be left in the off (down or aft) position.

**Fish Boxes with Macerator Pump**

Your boat is equipped with 2 aft fish boxes with a combined capacity of 130 gallons. The fish boxes are installed below the floor hatches located just forward of the transom.

*Note:* The casting deck storage boxes double as the forward fish boxes. Any water that collects in these storage boxes will gravity drain overboard via thru hulls. These storage boxes are not plumbed to the fish box macerator pump.

The fish box macerator pump is equipped with an automatic float switch. This pump drains the fish boxes and/or macerates any fish particles. As the fish boxes drain, water and/or debris travel to the collector box attached to the pump and then to the fish box macerator pump which pumps the water and/or debris overboard.

The fish box macerator pump operates on 2-way rocker switch (labeled Fish Box Pump) that is located on the switch panel. To properly operate the fish box macerator pump, fill either of the aft fish boxes with water. Then depress the fish box pump switch to the forward position. The water and fish particles will be pumped out of the tubs and then overboard via a fish box thru hull on the side of the boat. When you are finished emptying the fish box, place the fish box switch in the aft position to turn off the fish box macerator pump.

To check the system for drainage, remove the white 90 degree elbow fitting that connects the hose to the holding tank. The fitting is held in place with a rubber grommet therefore no hose clamps need to be removed. After removing the fitting, feel around just inside the holding tank for the 2 round plastic buttons (approx. ½” in diameter) and simply lift the 2 buttons to check the operation. If the float is working properly, the pump will activate. On occasion, you may find excessive debris in the holding tank that is causing a blockage. Just remove the debris through this same opening. When you are finished checking the operation, reinsert the 90 degree elbow fitting back into the rubber grommet until is seats itself.
Head Waste System

WHAT IS THE LAW? Congress enacted the Clean Water Act of 1972 (amended in 1987). This law addresses a wide spectrum of water pollution problems, including marine sewage from boats in navigable U.S. waters including coastal waters up to three miles offshore. The law further provides for "no discharge" by boats operated in enclosed lakes and reservoirs or in rivers not capable of interstate navigation. States may apply to the EPA to have certain other waters declared "no discharge zones" if discharge of treated sewage would be harmful. In short, boats with installed toilets must have an operable Coast Guard approved Marine Sanitation Device (MSD) designed to either hold sewage for pump out ashore or for discharge in the ocean beyond the three mile limit, or to treat the sewage to Federal standards prior to discharge.

All boats built since 1977 with installed toilets must have an operable approved type I, II or III MSD. Since 1980, all boats (including those built before 1977) with installed toilets must have an operable MSD. Both the U.S. Coast Guard and the Natural Resources Police can enforce MSD requirements.

Check with your local authorities, Coast Guard, local marina or your dealer for the rules and/or laws that may apply specifically in your area.

Console w/Enclosed Head (Porta-Potti)
This porta-potti comes equipped with with a 5.0-gallon holding tank. To operate the porta-potti system:

- Set the portable toilet on its front side so the cap on the holding tank is in a vertical position. Remove the cap and add SeaLand brand holding tank deodorant following the instructions on the deodorant container. Replace the cap firmly.
- Before using: Set the portable toilet in the upright position and remove the cap located on the right rear side of the fresh water tank. Fill with fresh water just below the neck of the fresh water inlet. Depress the bellows pump to add water to the bowl.
- After using: To flush, open slide valve by pulling out the handle and press the bellows pump one or more times. After flushing, close slide valve by pushing handle.
- Caution: Never add holding tank deodorant to the waste holding tank by pouring directly into the toilet bowl.

Before operating the porta-potti head system, refer to the manual in your owner's packet supplied by the porta-potti manufacturer for specific operating instructions.

Porta-Potti w/Dockside Discharge (Optional)
This optional head system includes the same porta-potti and 5.0-gallon holding tank, as the one described above, so be sure to follow the same operating instructions.

To utilize the optional dockside discharge feature, first locate the waste outlet. It is a stainless steel fitting, labeled waste and it is located amidships on the port gunwale. Twist the waste outlet cap to open the fitting and insert the hose provided by the marina into the waste outlet to connect to your marina’s dockside service facilities. Follow the instructions provided by the marina to operate their equipment.

Warning: Waste in the holding tank can form methane, an explosive gas. Use suitable precautions when any maintenance is done to the sanitary system.

Before operating the porta-potti head system, refer to the manual in your owner's packet supplied by the porta-potti manufacturer for specific operating instructions.

Electric Head w/Macerator & Holding Tank (Optional)
If you have selected the optional electric head, your boat is equipped to offer you the option of using overboard or dockside discharge to pump out the waste tank. This push button operating electric head
system comes equipped with a 7-gallon holding tank, macerator pump, diverter valve ("Y" valve) and switch panel, and uses sea water for flushing.

The flush control button and switch panel are installed on the aft wall of the head area. The flush control button operates the head, allowing you to flush the waste. The switch panel has switches for the head and the head macerator pump. To flush the toilet, first, move the head switch to the on position. Then press the round button labeled "Press to Flush". This action empties the head waste into the holding tank.

The head macerator pump, "Y" valve, holding tank and brass seacock are all installed below the sink area in the head.

The head macerator pump is used in the overboard discharge operation. The "Y" valve must be in the correct position to direct the waste either overboard or to your marina's dockside discharge facilities. Before utilizing the dockside or overboard discharge functions, make certain that the "Y" valve is in the correct position.

Before attempting to flush the toilet, make sure that the seacock is in the open position. The seacock is open when the yellow lever is in the full upright position. When the lever is in the horizontal position, the seacock is closed.

The "Y" valve is installed on the port side of the pump, just outside the view of the photo to the right. It allows you to switch back and forth between dockside and overboard discharge. The photos below show the 2 positions for the "Y" valve (i.e., dockside discharge vs. overboard discharge).

Dockside Discharge - When at a marina that offers dockside discharge, the marina will provide the external facilities needed to perform the dockside discharge operation. To operate the dockside discharge, turn the "Y" valve to the dockside discharge position as shown here.

The "Y" valve for the Electric Head as shown here is set to use dockside discharge. Follow the arrows. Waste is going from the holding tank, to the "Y" valve and then upward to the waste outlet.

The waste outlet is a stainless steel fitting, labeled waste. It is located amidships on the starboard gunwale. Twist the waste outlet cap to open the fitting and insert the hose provided by the marina into the waste outlet to connect to your marina's dockside service facilities. Follow the instructions provided by the marina to operate their equipment.

Warning: Waste in the holding tank can form methane, an explosive gas. Use suitable precautions when any maintenance is done to the sanitary system.
**Overboard Discharge** - To operate the overboard discharge, turn the “Y” valve to the overboard discharge position. The “Y” valve for the Electric Head as shown here is set to use overboard discharge. Follow the arrows. Waste is going from the holding tank, to the “Y” valve and then to the electric head pump.

Then, go into the head area and flip the macerator switch to the on position.

Before using the overboard discharge system, be sure to check with your local authorities, U.S. Coast Guard, local marina or your dealer for the rules and/or laws that may apply specifically in your area. Before operating the electric head system, refer to the manual in your owner’s packet supplied by the electric head manufacturer for specific operating instructions.

**Warning**: Waste in the holding tank can form methane, an explosive gas. Use suitable precautions when any maintenance is done to the sanitary system.

**Vacuum Flush w/Holding Tank & Overboard Discharge (Optional)**

This optional head system comes equipped with a VacuFlush head holding tank, head overboard/discharge pump and VacuFlush macerator pump that are all installed below the sink area in the head. The control panel with a switch for the head and the macerator pump are installed on the aft wall of the head. This head system also includes dockside discharge.

**Note**: Before attempting to flush the toilet or test the system, make sure that there is plenty of fresh water in the holding tank.

To operate or test the system, make sure that your fresh water tank is full of water. Then turn on the fresh water switch at the console and move the head switch to the on position.

To flush the VacuFlush head system, use your foot to depress the pedal at the base of the head. This action will pump fresh water into the stool, empty the head and transfer all waste into the waste tank. When you release the pedal, water will stop entering the stool and the flushing action will cease.

Your boat is equipped to offer you the option of using the overboard or dockside discharge to pump out the waste tank. Before using the overboard discharge system, be sure to check with your local authorities, Coast Guard, local marina or your dealer for the rules and/or laws that may apply specifically in your area.
Overboard Discharge – The Tank Watch 4 system is used in the overboard discharge operation. The two control panels used in the overboard discharge operation are installed on the aft head wall, next to the head and macerator switch panel.

You can check the waste level in the waste tank by monitoring the lights on the Tank Watch 4 panel and then turning the key to the automatic position. As waste enters the tank, the lights will change to indicate the waste level (i.e., green for empty, yellow for low, orange for mid level, red for full).

To operate the system, first make sure that the head and macerator switches located on the aft head wall are both in the on position. Then, turn the key on the Tank Master 4 panel to the “automatic” position. The green light next to the key switch will illuminate to indicate that the system is working and waste will begin pumping overboard via the thru hull located on the side of the hull. One of the lights on the Tank Watch 4 panel will also illuminate to indicate the level in the waste tank.

Once the tank level reaches the “low” level in the tank, the green light next to the key switch will go out and the system will turn off. You will need to turn the key to the “manual” position and hold it in place to complete the pump out process. To prevent damage to the pump, you cannot turn the key to the manual position without holding the key in place.

If the system does not seem to be pumping properly (water should shoot out approximately 10 feet via the thru hull), check for leaks, loose clamps, etc.

Refer to the manual in your owner's packet supplied by the manufacturer of the VacuFlush system for specific operating instructions.

Dockside Discharge – When at a marina that offers dockside discharge, the marina will provide the facilities needed to perform this operation. You will not need to use the Tank Watch system. The stainless steel fitting labeled “Waste” is located amidships on the starboard gunwale. Twist the cap to open the fitting and insert the hose provided by the marina into the dockside discharge waste outlet to connect to your marina’s dockside service facilities. Follow the instructions provided by the marina to operate their equipment.

Warning: Waste in the holding tank can form methane, an explosive gas. Use suitable precautions when any maintenance is done to the sanitary system.

Fuel/Oil Systems

Fuel Fill and Fuel Vent
The fuel fill is a stainless steel fitting labeled “Gas” or “Fuel” and is located approximately amidships on the starboard gunwale. Twist the cap to open the fitting. The cap is connected to the fitting by a chain or cable so that it will not fall into the water and/or get lost. Be careful not to pump fuel into any other fitting on the vessel.

Note: Never pump fuel into any fitting, opening or access on the boat unless it is labeled “Gas” or “Fuel”.

Warning: Suitable precautions when any maintenance is done to the fuel/oil system.
The external fuel vent is located below the fuel fill on the outside of the hull, and the gas tank is vented overboard. While you are filling the tank, fuel entering the tank pushes air in the tank out through the fuel vent.

**Fuel Tank**
The 240-gallon fuel tank is constructed of heavy gauge aluminum with internal baffling to minimize sloshing. The fuel tank is located under the deck and is secured between the stringers and bulkheads.

Located below the oval access pie installed at the forward edge of the bilge opening. Located below the access pie installed forward of the helm seat and aft of the console.

Inspect all hose connections on a regular basis. You can access other end of the fuel fill and fuel vent hoses via the round access plate that is installed just below the fuel fill fitting on the starboard gunwale.

**Fuel Sender & Fuel Pick Ups**
The fuel sender and fuel pick-ups are accessible via the oval access pie installed at the forward edge of the bilge opening.

The fuel sender is equipped with a float that moves up and down with the fuel level in the tank. The fuel level information is sent to the fuel gauge and keeps you informed of the approximate fuel level in the tank. If you feel that your fuel gauge is reading incorrectly, before considering changing the gauge, have your Pro-Line dealer's Service Department or a qualified service professional remove the fuel sender and check to make sure that the float is able to move up and down freely.

**Fuel Water Separators**
Depending on your selection of the various optional engine packages, your boat may be equipped with a fuel water separator for each engine. However, some engines come equipped with a built in fuel water separator. Please refer to the owner's manual provided by the manufacturer of your engine package for operational procedures and for information related to the care and maintenance of their product. When in doubt, always defer to the engine manufacturer's instructions and/or recommendations.

If your engine package requires the installation of fuel water separators, they will be mounted on one of the stringers or bulkheads in the bilge. There is one unit for each motor. The "spin on" filter cartridges should be renewed every season at a minimum. Fuel tanks that are not kept full accumulate water faster due to condensation. Therefore, the filter cartridges may need to be replaced more often depending upon usage and conditions or if motors begin to run rough. When replacing the filter cartridges for the fuel water separators, coat the rubber seal with a film of grease or oil to help prevent sticking.
If water should somehow enter your fuel tank via condensation, your fuel source, etc., it will become trapped in the fuel water separator before it is able to travel through the fuel system and to your engine.

Please refer to the owner’s manual provided by your engine manufacturer for proper procedures. Some engines will not have a separate fuel water separator located in the bilge. Instead it will be located on the engine itself. Check engine specs.

**Primer Bulbs**
A primer bulb is installed for each engine, if applicable, and it is used to prime the fuel pump in the motor with fuel. Squeeze the primer bulb a few times until resistance is felt in order to prime. If no resistance develops and the fuel pump will not prime, you may be out of fuel, the primer bulb may be defective, or a leak may have developed allowing air into the system. Primer bulbs, if applicable, are located with the rigging tubes where they exit the bilge and are easy to get to by standing on the dive platform.

*Note: Not all engines require primer bulbs. Refer to the engine manual for verification.*

**Oil Tank and Oil Fill**
Depending on your selection of the various optional engine packages (i.e., oil injected outboard engines), your boat may be equipped with remote oil tanks. If your engine package requires the installation of an oil tank, it will be mounted in the aft bilge area and can be accessed via the large bilge hatch. The oil fill will be installed on the transom and will accessible from the aft cockpit or the dive platform.

Make sure that the oil tanks are well stocked with the type of engine oil that is recommended for your engines. Refer to your engine manual. It is imperative that the oil supply remains clean and uncontaminated by water or dirt. Check to make sure the oil lines are free from leaks, kinks and chafing. Some motors use a primer bulb to initiate oil flow. Air may periodically enter the system and require purging. Refer to your engine manual for specific instructions.

If your optional engine package requires the installation of remote oil tanks, please refer to the owner’s manual provided by the engine manufacturer for operational procedures and for information related to the care and maintenance of their product. When in doubt, always defer to the engine manufacturer’s instructions and/or recommendations.

**Fuel / Oil Leaks**
The fuel tank is vented overboard and the vent should be inspected for obstructions regularly. Ensure all of the fuel hoses remain properly secured and located according to NMMA standards. Inspect all hose clamps and fittings to ensure they are double clamped where needed and that there are no fuel leaks in any of the hoses. Also, inspect the oil system, if applicable, and ensure that the oil tank and hoses remain properly connected and secured.

If you notice a fuel odor or see fuel in the bilge, there may be a leak somewhere in the fuel system. Correct any fuel leaks before operating the vessel.

*Caution: If at all possible, any fuel tank and or fuel system repair should be handled by your dealer’s service department or by another qualified service professional.*

**Stereo Equipment (Optional)**
Please refer to the owner’s manuals provided by the manufacturers of the stereo components listed in this section for operational procedures and for information related to the care and maintenance of their products. When in doubt, always defer to the component manufacturer’s instructions and/or recommendations.
Note: The individual manufacturers of each of the following products listed in this section provide the limited warranties for their equipment and most associated parts. Each manufacturer provides recommendations regarding service and warranty related issues. In many cases, service and/or warranty repairs must be performed by a repair facility that is authorized to work on their equipment.

Based upon the availability from our vendors, stereo equipment changes from time to time. Therefore, we request that you refer to the owner’s manual provided by the manufacturer of the stereo equipment for operational procedures and for information related to the care and maintenance of their product.

AM/FM Stereo with CD Player, Speakers (Optional)

The AM/FM stereo is powered by the dealer-installed batteries and comes equipped with a CD player and 4 speakers and is XM compatible. The installation locations are as follows:

- AM/FM Stereo with CD Player – Installed in the console.
- Speakers - Two speakers installed in the forward cockpit. Depending on whether or not you have selected the optional rigid Trylon T-top, the other 2 speakers are either installed in the overhead storage box or in the aft cockpit area.

XM Stereo Upgrade (Optional)

When activating your satellite service, your service provider will request that you provide them with the “Radio ID #”. You will find this 8 character ID # (alpha numeric) on the paperwork in your owner’s package.

If you cannot locate the paperwork, you will find the controller head unit (XM box) mounted on the inside wall of the console.

Seating

The following seating comes standard on the 29 Grand Sport:

- Fiberglass with baitwell station, sink & backrest
- Forward console seat with cushion & storage
- Transom (Foldaway)

In addition to the standard seating, an optional dual command station is available for installation at the helm. A set of optional bow cushions is also available for seating at the casting deck.
**Windows**

**Windshield**
The curved glass windshield assembly is molded to fit the console. Please refer to the Service and Care section of this manual for cleaning recommendations.

**Windshield Wiper (Optional)**
Depressing the wiper switch to the up or forward position activates the optional wiper. If at all possible you should try never to run the wipers on a dry windshield. This will dramatically reduce the life of your wiper blades.

**Head Window**
To allow for proper ventilation, a window is installed in the head compartment. The window is hinged at the top, has 2 latches at the bottom and comes equipped with a screen. To open the window, turn the 2 latches to the horizontal position and lift the window open. To close the window, rotate the hinged window back into the closed position and turn the 2 latches back to the vertical position to secure the window.

**Doors and Hatches**

**Transom Door**
The acrylic transom door is located on the starboard aft corner of the boat. The latch secures the door in the closed position. To open the door, slide the latch starboard (to the left when standing in the aft cockpit). The transom door should always remain closed while underway.

See the Service and Care section of this manual for cleaning recommendations.

**Hatches and Latches**
The fiberglass deck hatches for the forward and aft bilges can easily withstand the weight of passengers and gear; just like the rest of the deck surfaces. The twist latches that are installed on these deck hatches are made of stainless steel. Just lift the handle of the latch from the recessed area of the hatch, twist it and lift the hatch open. There is a small red dot on one side of the latch. If the red dot is visible when the hatch is closed, that means that even though the hatch may be closed, the latch is not secure. To make sure that all hatches are closed and secured before you get underway, lift the handle of the latch, turn it 180 degrees so that the latch catches. Then return the handle to the recessed area of the hatch. Once the hatch is secure, the red dot will no longer be visible.

Some hatches are equipped with gas shocks. The gas shocks allow you to easily open and close the hatches. The gas shocks also hold the hatches in place when they are open.

Additional hatches on the boat provide access to many components. The following photo identifies the locations of the components that can be accessed via these hatches.
Access Hatch Locations

- Casting deck storage boxes
- Fresh water fitting
- Fresh water tank
- Fresh water pump
- Wet/Dry storage
- Fuel hose
- Fuel vent hose
- Rod holder
- Fuel fill
- Fuel vent
- Sink drain
- Cleat
- Washdown fitting
- Thru hulls
- Breakers (All are located behind the dual battery switch panel)
- Starboard thru bolt for the motor bracket
- Starboard engine primer bulb (2 stroke engines only)
- Port thru bolt for the motor bracket
- Starboard engine primer bulb (2 stroke engines only)
- Washdown pump
- Anchor locker
- Waste fitting
- Wiring access (Behind 2 access pies on aft head wall)
- Fuel sender & pick-ups (below the oval access hatch)
**Head Door**
The vented poly head door is equipped with a locking latch. To open the door, just lift the latch and pull the door open. When closing the door, the latch will engage itself.

The door should never remain open when you are underway or when conditions might cause a passenger to lose their balance and accidentally fall through the doorway.

The locking latch comes with a set of two numbered keys. We recommend that you make note of the key number and keep it in a safe place. In the event that you need to replace the keys, this will allow you to replace just the keys and not the entire lock assembly. See the Service and Care section of this manual for cleaning recommendations.

**Storage**
Your boat has lots of storage for your tackle and gear:

- Storage shelves installed in the head area.
- Storage compartment below the forward console seat. This compartment contains a cooler/storage area and a shelf.
- Two casting deck storage boxes that gravity drain overboard.
- Tackle box with 3 trays for your small tackle is installed on the port side of the leaning post/bait station.
- Floor tackle storage in the forward cockpit.

**Hardware**

**Cleats**
Your boat is equipped with 1 standard and 6 pop-up cleats. They are installed to provide areas to permit you to tie off the boat at dockside, tie off to another boat that is anchored, secure bumpers/fenders, and/or tie off the anchor (when dropped) to prevent the line from pulling on the windlass, etc. You should never use the cleats for towing another boat or skier.

**Bow Rail**
The low profile bow rail is constructed of stainless steel. The railing, which is through bolted to the gunwale, is provided for safety. Never use the bow rail to tie off to anything heavier than a bumper/fender. Do not use the bow rail for anchoring, or to tie off to the dock or another boat. Do not use the bow rail to tow another boat or skier. Never stand on the bow rail or use it as leverage when pulling up an anchor, a fish or any other objects. Do not use the bow rail to tie off and/or secure a large catch, etc.

**Fire Extinguisher Holder**
This boat is equipped with a fire extinguisher holder installed on the port side freeboard. It is located within easy reach of the helm seat.

**Gunwale Trim / Rubrail**
A white rigid vinyl gunwale trim with a stainless steel insert is installed at the juncture of the deck and hull. This durable trim provides a nice clean look and serves as somewhat of a cushion when you are docking, coming along side another vessel, etc.

See the Service and Care section of this manual for cleaning recommendations.
Grab Rails
Stainless steel grab rails have been installed to provide safe boarding and navigation on the boat. One is located at the starboard transom ladder and two more are installed on each side of the forward console storage seat. Grab rails are also installed around the bait station in and the head area.

Bow Pulpit with Anchor Roller and Rope Locker Storage
We have installed an aluminum anchor roller at the bow pulpit. The anchor line can be secured inside the anchor locker and then routed through the windlass (optional equipment) and anchor roller. The anchor (not included as standard equipment) is held on the line beneath the anchor roller. This allows you to move about the bow area safely without tripping over the line or anchor.

Drain Plug
Before launching the boat, always make sure that the drain plug has been installed in the fitting on the transom at the keel. If your boat is being transported, remove the drain plug once the boat is secured on the trailer so that any excess water can be drained via the fitting. Never remove the drain plug when the boat is sitting static in the water.

If you live in an area where it snows and you are storing your boat on a lift during the winter, make sure that you remove the drain plug. When the snow melts, if the float switch for the bilge pump happens to fail, it could flood the bilge and damage electrical components in the bilge.

Cockpit / Deck Drains
There are two (2) cockpit/deck drains in the aft area of the cockpit that allow excess water in the cockpit to drain overboard via thru hulls on each side of the boat. To ensure that there is no blockage in any of the hoses connected to the drains, it is recommended that you occasionally run water through each of the cockpit drains and visually inspect the thru hulls to verify that water flows freely and that there is no blockage. To trouble shoot, check the hoses for leaks and make certain that all hose connections are secure.

Dive Platform - Integrated w/Ladder
An integrated Euro style dive platform is built into the fiberglass construction of the deck and hull and includes a stainless steel ladder on the starboard side of the transom.

An optional dive ladder can be installed on the port side of the dive platform for additional boarding capability. When factory installed, this option includes the installation of an additional grab rail on the port transom. With the engines tilted down, passengers can move easily through the transom door and across the large dive platform to the optional ladder.

Thru Hull Fittings
Thru hull fittings provide overboard drainage. The following photos indicate the source of drainage for each of the thru hulls.
Port Side

Top Row
Aft bilge pumps

Center Row
Transom sink

Bottom Row
Cockpit/Deck drains

Left to Right
Baitwell sink
Baitwell overflow
Baitwell drain

Starboard Side

Bottom Row
Cockpit/Deck drains

Top Row – Left to Right
Forward bilge pump
Overboard discharge

Bottom Row – Left to Right
Hatch gutter drain
Forward fish box drain

Anchor locker drain

Bottom Row
Fish box drain

Fuel vent

Waste vent

Fish box drain

Fresh water vent
Rigid T-Top with Storage Box (Optional)

The anodized aluminum frame comes with a rigid T-top and built in storage box. A set of 4 rod holders is permanently mounted to the aft edge of the frame; providing you with additional rod holder capacity.

See the Service and Care section of this manual for cleaning recommendations for the anodized aluminum frame and the rigid T-top.

Note: Pro-Line installs mounting pads to the frame for additional support when outriggers are factory installed. Before adding after market outriggers, we recommend that you consult your Pro-Line dealer’s Service Department or another qualified service professional to add mounting pads to the T-Top frame.

Rigid T-Top with Storage Box & Outriggers (Optional)

When factory installed, this options includes the same frame and storage box as above. However, with the installation of the outriggers, we have included mounting pads for additional support.

When this option is selected and factory installed, the outrigger installation includes a pair of outrigger bases, poles and lines. The bases are constructed of anodized aluminum and are installed on the port and starboard sides of the optional T-top. Turn the handle at the bottom of the outrigger base to rotate the outriggers 90 degrees (from the side to the aft end of the boat).

Bimini Top (Optional)

An optional Bimini top can be installed to provide you and your passengers with plenty of shade during your voyage. The frame is made of anodized aluminum. The Bimini top comes with a cover/boot to protect the top when it is not in use. Both the Bimini top and Bimini boot are made of Sunbrella canvas.

The Bimini top should not be left up when transporting the boat on the highway. Therefore, whenever transporting the boat on a trailer, you should remove the pins that hold the Bimini top upright and secure the canvas top in the Bimini boot. Depending on the speed in which you are traveling, you may want to secure the top further.

See the Service and Care section of this manual for cleaning recommendations.

Rod Holder Storage

In addition to the rod holders installed on the optional rigid T-Top frame, the following rod holder storage is available:
• Rod Holders w/Inserts - Two pair of flush mounted stainless steel rod holders with PVC inserts to protect your rods
• Rod Racks - A pair of rod racks is installed in the port and starboard freeboard of the aft cockpit. Combined, they can accommodate up to 4 fishing rods.
• Four transom mounted rod holders.
• Rod rack inside the console that can accommodate up to 4 fishing rods. (Optional)

Vinyl Upholstery

Please see the Service and Care section of this manual for information on how to clean and care for your seat cushions and cockpit bolsters.

Electronics (Optional)

Based upon the availability from our vendors, this equipment changes from time to time. Therefore, we request that you refer to the owner’s manual provided by the manufacturer of your electronics equipment for operational procedures and for information related to the warranty and the care and maintenance of their product. Refer to your owner’s package for additional information.
Operation and Performance

Trim / Tilt

The power trim system allows the operator to raise and lower the motor(s) throughout an infinite number of settings between its upper and lower limits. There is a trim setting that will yield maximum speed, stability or maneuverability for every throttle setting. Refer to your engine manual for specific questions regarding the trim and tilt.

For most conditions, the best all-round performance is obtained when the bow of the boat is slightly out of the water and all motors are trimmed to the same degree.

General trim down (or "in") characteristics are:
- Starting position for best acceleration to plane.
- Lowers the bow, which provides better stability and ride in rough water.
- Reduces boat speed and economy due to increased drag of hull and drive.
- More spray over bow.

General trim up (or "out") characteristics are:
- Raises the bow of the boat out of the water resulting in less hull in the water.
- Greater speed and economy for a given throttle setting.
- Greater maneuverability; provided prop does not ventilate during the maneuver.
- In excess, the reduced stability can lead to bouncing, porpoising and propeller ventilation.

In addition to providing ideal boat performance, the power-trim/tilt enables the motors to be raised (tilted up) for trailering, beaching and launching. Avoid operating the trim switch if travel of the motor is blocked or it has reached the limits of travel.
Propellers

If your Pro-Line was ordered with a factory installed engine, it will have a propeller that has been performance tested to provide the best all-round performance for your engine/hull combination at sea level. In some situations, it may be desirable to re-prop your Pro-Line to enhance the desired performance needs for your area. For instance:

- Decreasing the pitch will enhance acceleration and power at high loads.
- Increasing the pitch will increase speed at light loads.
- Decreasing the diameter will compensate for any loss of power at high altitudes.
- Increasing the diameter results in higher efficiency at low speeds at the expense of top end speed and acceleration.

Be sure not to over rev the engine when re-propping or engine damage could result. Operating your engine with a damaged prop will decrease performance, increase fuel consumption, and may introduce undesirable handling characteristics. The vibration caused by running a damaged prop could cause costly damage to your lower drive unit.

Starting

Follow the information in your engine manual if it deviates from the following instructions.

Before Starting the Engines:
- Ventilate all enclosed spaces.
- Visually inspect the bilge for fuel and check for vapors.
- Visually make sure that the propellers are clear of obstructions or swimmers.
- Make sure that the engine cooling water intakes are submerged.
- Lock the helm seat to face straight forward.
- Attach the safety stop switch lanyard.

Starting the Engines:
Start the engine according to the instructions provided in your engine manual.

After Starting the Engines:
After your engine starts, make sure to observe a few basic rules to insure the engine is functioning properly:
- Verify engine cooling water circulation.
- Check the temperature gauge for the first few minutes to make sure the engine is warming properly and not overheating.
• Check for fuel, oil and water leaks. If any leaks are found, shut down the engines and make the necessary repairs before continuing on with your voyage.
• Follow the break-in procedures as recommended by the engine manufacturer for your engines.

**Fueling**

Certain precautions must be observed when fueling due to the explosive nature of gasoline.

**Before Fueling:**
- Secure the boat to the dock with adequate moorings.
- Turn off the engine and any equipment having spark-producing contacts.
- Close doors and hatches so fumes do not enter boat.
- Disembark all persons not necessary for the fueling operation.
- Prohibit all smoking and open flames on board and nearby.
- Have a fire extinguisher close by.

**While Fueling:**
- Keep the nozzle in contact with the fuel fill opening to minimize the possibility of sparks.
- Do not pump fuel into any opening unless it is marked “Fuel” or “Gas”.
- Do not leave the boat unattended.
- Do not spill fuel.
- Do not overfill. Filling a tank until fuel is vented is dangerous.
- Allow room for expansion.

**After Fueling:**
- Close the fuel fill opening.
- Wipe up any spilled fuel and dispose of the rags on shore.
- Open the doors and hatches to ventilate the boat before starting the engines.
- Check for fumes in the bilge and continue to ventilate if fumes are present.

**Loading**

The performance of any boat is contingent upon the amount of load carried. Reduce the load to permit safe operation in rough and adverse conditions. Heavy loads reduce the performance and increase fuel consumption. The load positioning greatly affects the performance of your boat. If excessive weight is placed too far aft, the boat may have difficulty getting on plane and may ride rough. If the load is concentrated too far forward, the boat may “bow steer” or veer off to the side when entering a large wave at an angle. There may also be a reduction in the top end speed. The optimum load location is generally near the center of the boat.

When loading your Pro-Line, always:
- Maintain a balance both port to starboard and bow to stern.
- Keep heavy items as low as possible.
- When boarding, step (never jump) into the boat one passenger at a time.
- Pass gear from the dock to someone in the boat. Do not carry gear while boarding.
- Never allow passengers to hang their feet over the side of the boat.
- Do not allow passengers to sit or stand on top of the stern or gunwales.
- Do not overload the boat to the point where water enters the cockpit scuppers.
Service and Care

To enjoy trouble free use of your Pro-Line, follow the recommended procedures and instructions relating to the service and care of your boat. Failure to follow proper maintenance practices will result in shorter life of your equipment and may void your warranty.

Much of the installed equipment on your Pro-Line is warranted separately. Follow the care instructions found in your owner’s packet to keep these individual warranties in force.

Your engine manual contains service information relating to your particular engine installation. Follow the engine manufacturer's recommendations for trouble free service and to preserve your warranty rights.

Your new Pro-Line boat is your home away from home. Generally, you should maintain your boat with the same care as you would maintain your home or automobile. Many of the same products used in caring for your home and automobile can be used to maintain your new boat.

Fiberglass and Gelcoat

The gelcoated fiberglass on your Pro-Line provides a smooth, easy to clean and maintain surface. Regular cleaning and waxing will preserve the finish on your boat for many years to come.

Use a mild detergent and plenty of fresh clean water to swab down the exposed gelcoat on your boat. Do not use harsh cleaners containing ammonia, chlorine, or abrasives. Do not use acetone or any ketone solvents. Stubborn stains may be removed with alcohol or kerosene provided they are washed off immediately and completely with a mild detergent and water.

Wax all gelcoat surfaces a minimum of twice a year, more often if the boat is stored in the sun. If neglected, the surface will take on a dull appearance that is not restorable by waxing. Hand buff with a rubbing compound such as Dupont No. 7, or power buff with Mirror Glaze No. 1. Then follow up with a good waxing.

Caution: When power buffing, use care not to leave swirl marks or "burn" the surface. You may want to leave power buffing to a professional.

The gelcoat on your Pro-Line is approximately 25-mil thick. Minor scratches and deep stains that do not penetrate the gelcoat can be lightly wet sanded with 600 grit sand paper, buffed and waxed to remove.

If a deep gouge to the surface occurs that goes through the gelcoat and into the fiberglass, it must be repaired promptly to avoid further damage. Your dealer is best equipped to handle this repair and achieve good bonding and color match. There are many different gelcoat repair kits on the market for this use. However, results obtained may not be satisfactory. See your Pro-Line dealer for fiberglass damage deeper than 1/16 inch.

Epoxy Barrier Coat & Bottom Paint

If your boat will be in the water continuously, we recommend sealing the bottom of the hull with a high quality barrier coating. Unsealed gelcoat may form water blisters. Repair of water osmosis blister damage is not covered under the limited warranty.

The phenomenon of osmotic blistering is known to occur in saltwater, brackish water and/or fresh water. Any boat left in the water for any period of time is susceptible. Nearly all the marine bottom paint manufacturers today offer coatings that help protect the hull against blistering. If required, contact your Pro-Line dealer’s Service Department or another qualified service professional for further information.
We recommend that your boat be cleaned often to prevent unwanted marine growth on the hull and to maintain ultimate high performance. The bottom of your boat must be kept clean. Any buildup of marine life from water will create drag and affect the boat’s performance and efficiency. Never use brushes or scouring pads on the bottom of your boat, as this can cause small scratches that will actually trap dirt.

Antifouling bottom paint is designed to dissolve slowly to prevent marine growth. Therefore, the hull bottom should be repainted at the beginning of each boating season. Factors to take into consideration when selecting a protective bottom paint are water temperature, pollution, salinity, current and organic material in the water.

Important: Consult your Pro-Line dealer’s Service Department or another qualified service professional for recommended bottom paints and local laws that may govern your area. Many states regulate the chemical content of bottom paints to meet environmental standards and regulations.

Blisters are unforeseen and unexplained phenomena that are relatively undefined. There is no 100% method of prevention, although barrier coating and bottom painting are the best known deterrents.

We recommend that a professional apply the epoxy barrier coat and bottom paint. The hull should be sanded prior to applying the barrier coat and bottom paint. This is done so that the epoxy coat will properly adhere to the hull, and when done correctly, will not void the hull warranty. Pro-Line Boats does not recommend using an etching primer in lieu of sanding the bottom.

Bottom painting is an annual operation but may require more frequent applications if the bottom becomes scratched, damaged, etc. We recommend strict adherence to the manufacturer’s recommendations when barrier coating and bottom painting your vessel. There is a small window of time in which the coats must be applied in order to properly complete the application process; therefore, we recommend that a qualified professional do this process.

While barrier coating and bottom painting are the best preventative to blisters caused by the environment, this is in no way a guarantee that they will not occur.

Graphics

Your graphics may be cleaned with a mild dish cleaning soap and warm water or a good marine grade cleaner that is recommended for cleaning gelcoat. Never use any harsh chemicals, abrasive cleaners or any hard objects, as they will damage the graphics. Be sure to read the manufacturer’s directions carefully before using any product on your graphics or gelcoat.

Gunwale Trim/Rubrail

The gunwale trim/rubrail that is installed at the juncture of the deck and hull is made of flexible, semi-rigid vinyl and rigid PVC. It should be cleaned with the same products used to clean the gelcoat. The insert is made of stainless steel. See the Stainless Steel section further in this section for cleaning recommendations for the stainless steel insert.

Water Pumps

The round filter attached to the side of the pump should be removed and cleaned often with clear water.
Fuel Water Separators
If fuel water separators are installed on your boat, the “spin on” filter cartridges should be renewed every season at a minimum. Fuel tanks that are not kept full accumulate water faster due to condensation. Therefore, filter cartridges may need to be replaced more often depending upon usage and conditions or if motors begin to run rough. When replacing the filters for the fuel water separators, coat the rubber seal with a film of grease or oil to help prevent sticking.

Compass
During periods of long storage, it is recommended that you remove the compass from the boat and store it in a location providing normal room temperature. At low temperatures, an air bubble may form on the top of the dome. This will in no way affect the reading or accuracy. When restored to normal temperature, the air bubble will disappear.

Clean the Lucite compass dome carefully with a moistened soft cloth to avoid scratching. In salt-water operation, salt crystals from the spray may form on the dome. These crystals should be removed with a moistened soft cloth. A dry cloth and/or harsh rubbing may scratch the compass dome. Any good grade of paste wax can be applied to the dome to retain its luster and optical clarity.

Aluminum
Pay particular attention when cleaning the tubing directly beneath the top (i.e., hard top, T-top, Bimini top). This area does not receive the natural rinsing action of rainwater and is shielded from the sun. Therefore, it does not dry as completely or quickly as the rest of the frame. The top of the frame is often overlooked when cleaning the boat and should be hand washed and dried often. This area is likely to be the first place that staining or pitting occurs.

Aluminum is corrosion resistant but not corrosion proof. The grain structure, when modified by welding processes, has increased susceptibility to micro-corrosion (invisible to the unaided eye) and cracking. Proper care will preserve the weld strength and beauty of your aluminum:

- Always clean frequently with a mild non-abrasive soap and lots of fresh water. Most glass cleaners work.
- Always protect with a wax, especially around welds to guard against micro-corrosion, cracking and rust spots.
- Always remove rust and corrosion spots, as they appear, with an aluminum cleaner.
- Thoroughly wash the aluminum with a soft towel or sponge using lots of soap and water. Remove all dried salt crystals and other contaminates. Rinse completely with direct water pressure.
- Clean and rinse it well.
- Wash it often enough to keep contaminates from forming or building up.
- Avoid the use of bleach or chlorides to clean the aluminum and/or nearby components. Chlorides can leach onto the aluminum when nearby.
- Never clean with acids or bleaches.
- Avoid abrasive cleaning products. NEVER use sandpaper, steel wool, brass wool, wire brushes, polishing wheels, or rubbing or polishing compounds. These items will remove anodizing and lead to pitting.
- Never permit contact with iron, carbon steel, or other metals, which could cause rust or corrosion.

Additional information from Taco Metals is included in your owner's package.
**Stainless Steel**

Stainless steel is used for bow rails and deck fittings on your Pro-Line. Stainless steel is not completely free from corrosion attack. It is NOT stain or rust proof. When used in contact with chloride salts, sulfides or other rusting metals, stainless will discolor, rust or even corrode. The degree of surface oxidation is directly affected by local atmosphere and saltwater concentrations. All metals are subject to corrosion in some environments. The grain structure of stainless, when modified by welding processes, has increased susceptibility to micro-corrosion (invisible to the unaided eye) and cracking.

Our most helpful recommendation is that you give your stainless steel hardware the same attention that you would use to maintain other materials on your boat. Regular fresh-water washing with a mild abrasive cleaner will keep your stainless bright and beautiful.

- Always cleans stainless frequently with soap and water. Any cleaner safe for glass is usually safe for stainless.
- Always remove rust spots as soon as possible with a stainless, brass, silver or chrome cleaner. Irreversible pitting will develop under rust that remains on stainless for any period of time.
- Always use a cleaner, like a good car wax, for added beauty and protection.
- *Never use coarse abrasives like sandpaper or steel wool on stainless as these can cause rusting.*
- *Never clean with acids or bleaches.*
- Never leave stainless in contact with iron, steel or other metals, which cause contamination leading to rust or corrosion.
- Always protect with a wax, especially around welds to guard against micro-corrosion, cracking and rust spots.

Additional information from Romac and G. G. Schmitt and Sons is included in your owner's package.

**Corrosion Protection**

Spray all electrical connections with a good quality corrosion guard annually and whenever an electrical connection is repaired or replaced.

If you moor your Pro-Line in salt water for extended periods, be sure to check the transom mounted anti-corrosion anode often for operation. Check the electrical connections (green wire) on all metallic fittings with anode for conductivity with an ohmmeter. Make sure the anode surface is exposed and not caked with corrosion and scale. Renew the anode if it is more than 50% eroded. Your motor and/or drive unit have a sacrificial zinc anode to mitigate the effects of electrolysis which causes corrosion. Maintain this anode in accordance with the maintenance schedule in your engine manual.

**Transom Door**

To clean the acrylic door, rinse with fresh water to remove as much grime as possible. Use bare hands with plenty of water so you can feel any grit and avoid grinding it into the surface as you dislodge it. When all material that may scratch the surface is removed, use a soft clean cloth with a non-abrasive mild detergent and fresh water. Rinse and blot dry with a clean dry chamois.

Grease and adhesives may be removed with kerosene, hexane or white gas (not gas you burn in your boat, car, or lawnmower). Never use solvents such as acetone, silicone spray, benzene, carbon tetrachloride, dry cleaning fluid, lacquer or paint thinner, or any chlorinated solvent on acrylic since they may dissolve the material.
Head Door

The head door is made of a strong poly (i.e., starboard material). To clean the poly door, rinse with fresh water to remove as much grime as possible. Then, wash with a mild dish cleaning soap and warm water or a good marine grade cleaner that is recommended for cleaning poly, plastic or vinyl. You may use a soft bristle nylon brush for stubborn stains. Never use any harsh chemicals, abrasive cleaners or any hard objects, as they will damage the poly/starboard material. Be sure to read the manufacturer’s directions carefully before using any cleaning product on your boat.

Tackle Box

Clean the tackle box trays and storage area using a soft cloth, warm water and a mild detergent or a good marine grade cleaner that is recommended for cleaning plastic or vinyl. Never use any harsh chemicals, abrasive cleaners or any hard objects, as they will damage the finish. Be sure to read the manufacturer’s directions carefully before using any cleaning product on your boat.

Windshield

The curved glass windshield is made of tempered glass. Each of these panels has a very small, discreet label that states that they are made of tempered glass.

To clean the tempered glass panels use commercially available glass cleaners or a mixture of fresh water and vinegar. Do not use abrasives, harsh chemicals or metal scrapers. Regular cleaning will help assure clarity of the glass for safe boating.

Never use any harsh chemicals, abrasive cleaners or any hard objects, as they will permanently damage the windshield.

Rigid/Trylon Top

If you have selected the rigid T-Top, your new top is made from Trylon. This is a composite plastic not Fiberglass. It will give you years of trouble free service with a few simple steps.

- Clean the rigid T-Top with soap and water. You may use denatured alcohol for hard to remove stains.
- Never clean using acetone or other harsh solvents, as this will damage your rigid T-Top.
- Your rigid T-Top can be waxed using a standard non-abrasive automobile wax.
- If you should need to tighten the rigid T-Top to the frame, use care not to over stress or deform the top as this can cause failure over time. The top should be snug but not deformed by the fasteners.

Bimini Top & Windscreen

Canvas

One of the best ways to keep Sunbrella brand fabrics looking good and to delay the need for deep or vigorous cleanings is to hose fabrics off on a monthly basis with clear water. This practice will help prevent dirt from becoming deeply imbedded in the fabric and eliminate the need for more frequent vigorous cleanings. In most environments, a thorough cleaning will be needed every two to three years.
When it's time for a thorough cleaning, Sunbrella fabrics can be cleaned while still installed on your boat. It is important to observe the following:

- Brush off loose dirt.
- Hose down.
- Prepare a cleaning mixture of water and mild soap (Ivory Snow, Dreft or Woolite - no detergents). Water should be cold to lukewarm. Never more than 100 degrees.
- Use a soft bristle brush to clean.
- Allow soap to soak in.
- Rinse thoroughly.
- Air dry. Never apply heat to Sunbrella fabrics.

If stubborn stains persist, you can use a diluted chlorine bleach/soap mixture for spot cleaning of mildew, roof run-off or other similar stains. Prepare a special cleaning mixture:

- Four ounces (half cup) of chlorine bleach.
- Two ounces (one-fourth cup) of mild soap.
- One gallon of water.
- Clean with soft bristle brush.
- Allow mixture to soak for up to 20 minutes.
- Rinse thoroughly.
- Air dry.
- Repeat if necessary.

Re-treating the Fabric - Sunbrella fabrics are treated with a fluorocarbon finish to enhance water repellency. This finish is designed to last for several years, but must be replenished after a thorough cleaning. Based on test results, Glen Raven recommends 303 High Tech Fabric Guard™ as the preferred re-treatment product for Sunbrella fabrics. Fabrics should be retreated after thorough cleaning or after five years of use. Check with your local Sunbrella dealer or distributor for additional information.

For more information, visit the Sunbrella website at www.sunbrella.com for specific recommendations.

Isinglass (Windscreen Material)

Maintenance means "rinsing" with cold water and trying not to rub the dirt into the Isinglass. Never "Dry" dust the Isinglass panels. Any rubbing acts like sandpaper to plastic so keep rubbing to a minimum. Always use lots of cold water and a very very soft cloth when rubbing is required. Do not use paper towels or Terri-cloth towels. Try not to use any cleaning solutions, as most will cause yellowing and cracking.

When you have to store the panels of your windscreen and curtain package, always “roll up” the material to prevent creases. Do not fold the Isinglass as this will permanently damage the Isinglass material. Do not roll up the panels when wet, as the material will turn white or fog up. Dry the panels off first using a very very soft cloth before rolling them up. A few hours in the sun will get rid of the whiteness or fogginess in most cases.

Vinyl

Exterior Vinyl – Upholstered Seats and Cockpit Bolsters

Vinyl requires periodic cleaning to maintain its neat appearance and to prevent the build-up of dirt and contaminants that may permanently stain and reduce the life of the vinyl if they are not removed. The frequency of cleaning depends on the amount of use and on environmental conditions to which the vinyl is subjected. The procedures used for cleaning are dependent upon the end use circumstances.
For normal cleaning, most stains can be cleaned using warm soapy water and a clear water rinse. Moderate scrubbing with a medium bristle brush will help to loosen soiling material from the depressions of embossed surfaces. For stubborn stains, use either Fantastic or Mr. Clean, which are commercially available mild detergents, in accordance with manufacturers instructions.

For additional information regarding the care and maintenance of this product, please refer to the Morbern brochure provided in your owner’s package for recommended methods to clean specific types of stains.

**Winterizing and Storage**

Your new Pro-Line was winterized before it left the factory. If you launch the boat prior to storing it for the winter, please complete and/or comply with the following check list in order to ensure an easy “fitting out” in the spring:

**Pre-Storage Check List:**
- Remove drain plugs, keeping the bow high to drain any water accumulation.
- Run a pint of RV antifreeze through the bilge pump.
- Drain all water systems, including the head, and pump an approved antifreeze through all pumps, valves, drains and lines.
- Fill fuel tank (3/4 – 7/8 full) and add a stabilizer/conditioner such as “STA-BIL” to the gasoline.
- Prepare engine in accordance with the engine manufacturer’s recommendations found in your engine manual.
- Treat metal parts with a rust inhibitor.
- To prevent mold and mildew, use an absorbing product such as DampRid according to the manufacturer’s directions. An alternative and inexpensive option is to fill egg cartons with charcoal briquettes that have not been pre-treated with lighter fluid.
- Remove batteries and protect them from freezing. Trickle charge overnight once a month.
- Place under cover. If the boat is stored on a trailer, loosen tie-down straps and place blocks beneath axles to relieve the load on the tires.

For inboard/outboard engines only, to protect your boat during transport, the following procedures were affected at the factory prior to shipping and will need to be rectified prior to launch:
- Drain plugs on engine block removed.
- Petcocks on engine removed.
- Large hose on re-circulating pump removed.
- Power steering cooler hose removed.
- All other water hoses disconnected (left in place with hose clamps tightened to prevent their loss).

**Fitting Out After Storage**
- Check entire fuel system for loose fittings, leaks and damage.
- Clean battery terminals; install battery(s), and coat terminals with a deoxidizing agent.
- Check all thru hull fittings and hoses for obstructions, water tightness and condition.
- Test all lights for proper operation.
- Check wiring, terminal blocks and plugs for loose connections and corrosion.
- Verify switch and equipment operation.
- Check line condition. Inspect anchor and rope.
- Clean out any debris from bilge and cockpit.
- Flush water systems.
• Install hull drain plug.
• Verify operation of equipment before leaving dock.

Resealing

In the heat and sun, silicone and sealant can degrade over time. We recommend that you reseal around everything that comes in contact with the deck or hull with a high quality silicone such as 3M 5200 sealant annually. This includes but is not limited to the following:

<table>
<thead>
<tr>
<th>Cleats</th>
<th>Dive ladder</th>
<th>Bimini top hardware</th>

Additional Cleaning and Maintenance Products

**Flitz** - For use on brass, copper, stainless steel, chrome, silver, gold, pewter, nickel, factory gun bluing, bronze, platinum, tin, aluminum, magnesium, anodized aluminum, painted surfaces, fiberglass, Plexiglas and plastics. Flitz is available at many marine supply stores, marinas and at Home Depot. For more information on this product, contact the manufacturer at:

Flitz International Ltd., Waterford, WI 53185, 800-558-8611

**Woody Wax** - Can be used on a variety of surfaces such as:

- Aluminum and Metals – T-tops, tuna towers, anodized aluminum, aluminum, stainless, chrome, boat trailers, fishing gear, etc.
- Fiberglass and Non-Skid – Fiberglass, non-skid decks and colored gelcoat.
- Electrical and Engines – Electrical equipment, electrical connections, wiring harnesses, outboards, engines.
- Plastics – Plastic, vinyl seats, Plexiglas.

Be sure to read the manufacturer's information carefully before using Woody Wax products on any component on your boat. For more information regarding this product, visit their website at [www.woody-wax.com](http://www.woody-wax.com).

**Tef-Gel** - Bed all SS fasteners that come in contact with aluminum with Tef-Gel to prevent the galvanic corrosion between these two dissimilar metals. See the Tef-Gel website for more details ([http://www.wolfwire.com/tefgel/frameset.htm](http://www.wolfwire.com/tefgel/frameset.htm)).

**Ivory Soap** and clean warm water – no cross contamination

**Lysol Foaming Cleaner** - Works well for cleaning gelcoat, vinyl and Formica.
Appendix

Helpful Check Lists

Print and use these checklists, and do not operate your boat without doing the following:

Each Time You Go On A Boat Trip

- Make sure you know where CO exhaust outlets are located on your vessel.
- Educate all passengers about the symptoms of CO poisoning and where CO may accumulate.
- When docked or rafted with another boat, be aware of exhaust emissions from the other boat.
- Confirm that water flows from the exhaust outlets when the engines and generator (if equipped) are started.
- Listen for any change in exhaust sound that could indicate an exhaust component failure.
- Test the operation of each CO alarm by pressing the test button.

Once A Month

- Make sure all exhaust clamps are in place and secure.
- Look for exhaust leaking from exhaust system components. Signs include rust and/or black streaking, water leaks, or corroded or cracked fittings.
- Inspect rubber exhaust hoses for burned, cracked or deteriorated sections. All rubber hoses should be pliable and free of kinks.
- Clean the bilge and all bilge components with a mixture of bleach and water. Then, follow up by misting the bilge and components with WD-40. This includes but is not limited to the hoses, seacocks, pumps, connections, clamps, air conditioner pumps, generator (if equipped), etc.

Once A Year

Have a qualified marine technician:

- Replace exhaust hoses if cracking, charring or deterioration is found.
- Ensure that your engines and generator are properly tuned and well maintained (if equipped).
- Inspect each water pump impeller and the water pump housing. Replace if worn. Make sure cooling systems are in working condition.
- Inspect all metallic exhaust components for cracking, rusting, leaking or loosening. Be sure to check the cylinder head, exhaust manifold, water injection elbow and the threaded adapter nipple between the manifold and the elbow.
- Clean, inspect and confirm proper operation of the generator cooling water anti-siphon valve (if equipped).
- Spray CRC on all of the connections behind the console.

Trouble Shooting Chart

**PROBLEM:** Poor speed or fuel economy:

- Wrong propeller for load or conditions.
- Trim is in too far.
- Load is too far forward or too heavy. Boat has taken on water.
- Marine growth on hull. Line or anchor is dragging.
- Fuel is stale or partially blocked. Engine is worn, out of tune or underpowered.
- Improper rigging. Air intake or exhaust is partially blocked.

**PROBLEM:** Engine cranks but will not start:

- Out of fuel. Filter is clogged. Fuel line kinked or fuel vent plugged.
- Water in fuel.
- Engine problem (electrical, fuel pump, blockage, etc.).
- Safety stop switch lanyard not installed.

**PROBLEM:** Engine will not crank:

- Drive is in gear (check operation of the throttle release).
- Battery is weak. Terminals corroded or loose.
- Engine or drive is damaged.

**PROBLEM:** Engine runs but boat will not go:

- Throttle release is engaged.
- Disconnected shift linkage.
- Damaged prop, or lower drive unit.
- Entangled in lines or weeds. Anchor is down.

**PROBLEM:** Prop cavitates:

- Trim out too far. Motor is too high.
- Weeds on prop.
- Bow heavy, damage to hull.
- Prop is damaged.

**PROBLEM:** Excessive vibration:

- Propeller, engine, or drive unit damaged.
- Hull damaged.

**PROBLEM:** Boat will not turn:

- Steering unit needs fluid or has trapped air. Tiller is disconnected (helm turns).
- Steering trunion or mechanism jammed (helm won't turn).

**PROBLEM:** Electrical problems:

- Corroded wires, terminals or plugs.
- Broken, loose or short circuited wires.
- Circuit breaker tripped.
- Defective switch, device or breaker.
- In-line fuse blown.
- Overloaded circuit.

**PROBLEM:** Handling problems like:

- **Porpoises**
  - Trimmed out too far, damaged hull (rocker), trim tabs up, stern heavy.
- **Runs wet**
  - Trimmed in too far, bow heavy, trim tabs down, overloaded for conditions.
- **Hard ride**
  - Stern heavy, trimmed out too far, going too fast for conditions.
- **Lists**
  - Loaded to one side, trim tabs set wrong, trimmed too far in, fuel tanks uneven.
- **Over bank in turn**
  - Trimmed in too far, improperly located load, throttle advanced too far.
- **Catches in turns**
  - Damaged hull (hook), stern heavy, trim tabs down.
